School teaching seems to be the most
popular of all the fields that are open
to college women. In 1890 there were
in the United States 735 women who
were professors in colleges and universities.

MR. BRYAN ACCEPTS HIS NOMINATION.

Talks Silver to Thousands of
Gold New Yorkers.

HAROLD AGAINST ELDER SEWALL

Makes His First Republican Campaign
Speech—Hilborn Sure of Renomination
—Fusion in Washington and
Iowa—Gold Democrats Confering.

NEW YORK, Aug. 12.—That the interest of the whole city of New York was focused today upon Madison Garden, where William J. Bryan of Nebraska and Arthur Sewall of Maine, who were to be formally notified of their nomination by the Democratic party for the offices of President and Vice President of the United States, was proved by the groups of sovereign electors, which as early as the middle of the afternoon began to come under the trees in Madison Square. By 5 o'clock they had been reinforced by hundreds, and at 6 o'clock were multiplied to expectant thousands, and before 7 o'clock were swelled to a straining, clamorous army.

Bryan came on the platform on the arm of Chairman James K. Jones, followed by Sewall with George Stone of Missouri, and Bland with Elliott Danforth. Senator William M. Stewart and Senator John P. St. John occupied the boxes. The cheers for Mrs. Bryan had not ended when the foremost personage of the hour, the Democratic candidate for President, appeared and pushed in through the same doorway.

As the young statesman stood at the front of the platform a flag was raised and waved just above him in the gallery, so that its folds swept down as a background for his form and made him the one figure of the whole assemblage. The cheer that broke forth was of tremendous force. Fans and hats and handkerchiefs fluttered in the thick, sultry heat, and the cry of "Bryan! Bryan!" was repeated until the crowd wearied.

The candidate bowed his head several times, but it was only when he sat down at the right of the stand that the people took notice of the men who accompanied him.

Bryan's reply to the notification address was devoted almost entirely to the money question. In his opening remarks he said:

"We do not underestimate the forces arrayed against us, nor are we unmindful of the importance of the struggle in which we are engaged, but, relying for success upon the righteousness of our cause, we shall defend with all possible vigor the position taken by our party. We are not surprised that some of our opponents, in the absence of better arguments, resort to abusive epithets, but they may rest assured that no language, however violent, or invectives, however vehement, will lead us to depart a single hair's breadth from the course marked out by the National convention. The citizens, either public or private, who assail the character or question the patriotism of the delegates assembled in the Chicago convention assail the character and question the patriotism of the millions who have arrayed themselves under the banner raised there.

"It has been charged by men standing high in business, in political circles, that our platform is a menace to private security and public safety; and it has been asserted that those whom I have the honor for the time being to represent not only meditate an attack upon the rights of property, but are the foes of social order and national honor. Those who stand upon the Chicago platform are prepared to make known and to defend every emotion which influences them, every purpose which animates them and every hope which inspires them. They understand the genius of our institutions, they are staunch supporters of the form of government under which we live, and they build their faith upon the foundations laid by their fathers."

After the meeting adjourned Bryan spoke to a crowd of 10,000 people in front of the Bartholdi Hotel. His audience was largely workmen and he was loudly cheered.

Actress to Talk for Bryan.

KANSAS CITY, Aug. 19.—Miss Helena Hartman Mitchell, an actress, will shortly take the stump for Bryan. Miss

Mitchell will open at Bloomington, Ill., on Labor Day, and from that time up to election will make daily speeches over the country.

SON AGAINST FATHER.

Harold M. Sewall Speaks for the Republican Party.

FOXCROFT, Me., Aug. 14.—The Republican campaign was opened here tonight by a big rally, at which Harold M. Sewall of Bath, Me., son of the Democratic candidate for Vice President, delivered his first speech on the issues of the day. Republicans and Democrats came from far and near. The meeting was held in the open air and over 2,000 people attended. Sewall declared for protection, which he said was first in importance in the campaign, and then delivered a strong argument in favor of sound money. Sewall will stump the State in opposition to the ticket of Bryan and Sewall. He is on good terms with his father, and they agree on everything except politics.

APPEAL TO GOLD DEMOCRATS.
Call for a State Convention in New York.

NEW YORK, Aug. 19.—The sub-committee of the Democratic party reform organization met this afternoon and after a consultation issued a call for a State convention to be held at Syracuse on Monday, August 31st, to choose delegates to the convention of the National Democratic party at Indianapolis, and to nominate or provide for the nomination of Presidential Electors, Governor and other State officers, or to take such action in the premises as the convention may determine to be advisable.

Fusion in Washington.

ELLENBURG, Wash., Aug. 14.—Fusion of the Populists, Democrats and Free Silver men who left the Republican party has been effected in the State of Washington, and the name of the combined party will be the People's party.

Hilborn Will be Nominated.

OAKLAND, Aug. 15.—Congressman Hilborn swept Alameda county in the primaries today, and his renomination is assured, since he has pledged to him more votes for the Vallejo convention than are necessary to bring about that result.

Fusion in Iowa.

OTTUMWA, Iowa, Aug. 13.—Complete fusion was effected by Democrats, Populists and Free Silver Republicans at the Democratic State convention here yesterday.

SEWALL'S SHIPS LIBELED.

Some Trouble for One of Mr. Bryan's Running Mates.

NEW YORK, Aug. 14.—Two ships belonging to Arthur Sewall, the Democratic vice-presidential candidate, were seized by the marshal on libels yesterday morning, but were subsequently released on the filing of a bond. Mr. Sewall is the head of the firm of Arthur Sewall & Co., ship builders of Bath, Me. His partner is unknown to the libelants, who designate him in the complaint as "John Doe."

The two ships, the Iroquois and W. F. Babcock, were repaired on July 2 and July 15 last at the dry docks of the John N. Robbins Company. The amount of the bill was \$848 and \$852. The repairers declare that they have repeatedly asked for the payment of their bills, but could get no money. A second attachment against the Iroquois was obtained by Lewis Davis, owner of the barkentine E. S. Powell, which was injured in a collision with the Iroquois off Long Branch on June 22, and damaged, it is alleged, to the extent of \$8,000 for which amount action was now brought.

Importing Gold.

WASHINGTON, Aug. 19.—Acting Secretary Curtis today received a telegram from the Assistant Secretary at New York stating that arrangements had been made there to import \$5,000,000 in gold from Europe. While foreign exchange is slightly above the importing point, it is said that should it decline during the next few days as rapidly as during the last week, gold importations from Europe would yield a good profit. The officials are hopeful that the tide has turned, and that from now on the reserve will be rapidly increased.

Sharkey to Box With Sullivan.

NEW YORK, Aug. 10.—Tom Sharkey is to box four rounds with the former champion, John L. Sullivan, at Madison Square Garden on the night of August 31st. This has been settled. It will be a friendly bout in all the world implies. "Parson" Davies engineered the affair.

LESTY FIGHTING ON CRETAN SOIL.

General Review of News from
Many Lands.

TALK ON VENEZUELA AFFAIR.

Favorable Statements by British Ministry—Funds to Remove Kate Field's Body—St. Paul Breaks Her Record. Cholera in Egypt—Manitoba Schools.

ATHENS, Aug. 19.—A telegram from Tarrisa, Greece, says that the Turkish troops have massacred eighty old men, women and children in the villages of Trambuno and Komipo, Macedonia. The remainder of the inhabitants escaped to the mountains. The troops carried off the crops and burned both the villages.

NEW YORK, Aug. 19.—A special to the Herald from Canea, Crete, says: The Deputies were called together by the Porte's special commissioner, who received them in a most friendly manner. He came at once to the point by drawing their attention to the fact that there were in the demands they had formulated several which were detrimental to and were attacks upon the supremacy of the Sublime Porte, and that these would have to be withdrawn. He said the truth of this was apparent in such clauses, for instance, as that which asks for the powers to make commercial treaties. When this clause and others of a similar nature are withdrawn it is quite probable that the demands will be granted.

The Greek Government is at last tendering wise advice to the Deputies, and recommends them to continue negotiations. The Deputies are now in council. The Imperial Commissioner will probably give a reply to the Deputies this week.

NANSEN HOME AGAIN.

But He Didn't Reach the Pole—Does Gave Out.

CHRISTIANIA, Aug. 13.—The Aftenposten announces that Dr. Nansen, the Arctic explorer, has arrived at Vardoe Island, Norway, on board the steamer Vindward, which recently went to Franz Josef Land to bring back the Jackson-Farnsworth expedition.

The Verdensgang, a daily newspaper of this city, has received the following telegram from Dr. Nansen: "Home safe, after a fortunate expedition." VARDOE, Norway, Aug. 14.—Dr. Nansen says the Fram drifted with the ice in a westerly direction to 84 degrees, and he expects the vessel will eventually arrive at Spitzbergen. He adds that wherever they penetrated the ice was found to be broken. Large patches of water were also found 3,800 metres deep. Below a depth of 150 metres the water was apparently warmer, probably owing to the Gulf stream. Rocky points of which the explorers had no knowledge prevented entrance into the Olenek river for days.

In consequence of a scarcity of dogs Dr. Nansen was compelled to turn back at 86 degrees 15 minutes. He added that if he had been provided with a sufficient number of dogs and canoes the pole would have been reached.

WINS JAPANESE LINE.

New Steamships Will Make San Diego Their Port.

SAN DIEGO, Aug. 19.—A dispatch from Chicago, signed by A. H. Butler, published here this morning, says: "Arrangements with the railroad are complete. I have written authority that the steamers will go to San Diego if San Diego and Los Angeles comply with requirements made when we were there. I leave here for San Diego tomorrow, stopping one day in St. Louis. Mr. Asano leaves tomorrow for New York."

This refers to the arrangements between the Toyo Kisen Kaisha Steamship Company of Japan and the Santa Fe Railroad Company, to run steamers between Yokohama and San Diego for handling overland business, especially cotton, to Japan.

At a conference with San Diego and Los Angeles people Mr. Asano stated what the company wanted, which was a guarantee of 4,000 tons a month cargo on the outbound steamers. He had no doubt as to cargoes bound for this country, but wanted to be sure of return cargo.

goes. Arrangements with the Santa Fe, he thought, would be such as would settle the question of handling the cotton through this port, so that the bulk of the freight would be provided for. Perhaps 2,000 tons of cotton per month would be handled.

After a canvass of the situation San Diego and Los Angeles committees agreed to enter into a bond to guarantee 4,000 tons of freight per month, with the further agreement that if freight was not forthcoming the amount would be made up in cash at the rate of \$3 per ton gold or \$6 per ton silver.

KATE FIELD'S LAST WISH.

The Woman's Press Association Takes Action.

The Pacific Coast Woman's Press Association took official action yesterday in regard to bringing home the remains of the late Kate Field, says the Chronicle of August 11. The expressed sentiment of the members was that they would co-operate with the San Francisco Press Club, which had given \$50 to the fund, or if desired they would take the initiative. The sum of \$30 was contributed from the association funds and many of the members signified their intention of personally contributing.

A committee composed of the president, Mrs. Ada Henry Van Pelt, Mrs. Ella M. Sexton and Mrs. Frances Fuller Victor were appointed to attend to all details. They intend to solicit all press clubs throughout the Union to contribute. This is to give all a chance to honor the memory of Miss Field, and also to have a subscription sufficiently large to place a monument over her last resting place when her last wish shall have been fulfilled.

Short addresses were made yesterday by Mrs. Sarah B. Cooper, Miss Agnes Manning, Mrs. S. L. Foster, Mrs. Ada Van Pelt, Mrs. P. T. Dickinson and Mrs. Florence Percy Matheson.

It is estimated that a fund of \$1,000 will be required. The club expects to take charge of the remains when they reach San Francisco, and a memorial service will be held.

HOLY WAR THREATENED.

Very Unpleasant State of Affairs in China.

VANCOUVER, B. C., Aug. 12.—The steamer Empress of Japan, which arrived today, brought mail advices from the Orient as follows:

The news from Kansu is to the effect that the famous Tung Fuhslang, in obedience to the imperial command, has begun a massacre of all Mohammedans that he comes across. At Hsinlingfu he slew 3,000 business men and sold their wives and female children. Fears are entertained of a general rising, especially in Philinifu and Hailien, which have hitherto remained faithful. The rebellion hitherto was confined to a few Mohammedans, the declaration of the "holy war" being withheld until necessary as a measure of self-preservation. The Mohammedans across the Russian frontier have promised their aid, and it is feared a little spark lighted near the Tibetan border may grow into a great conflagration embracing Central Asia and India.

ANOTHER RECORD BROKEN.

St. Paul Makes Fast Passage From Europe.

NEW YORK, Aug. 14.—The American liner St. Paul, Captain Jameson, arrived from Southampton this morning after another record breaking passage of six days and thirty-one minutes. This beats her own former best record by five hours and one minute, and that of her sister ship, the St. Louis, by one hour and fifty-three minutes. The St. Paul, just off the dry dock, left Southampton last Saturday at twenty-two minutes past noon, passing the Needles at 1:44 p. m. She reached the Sandy Hook lightship at 9:15 o'clock this morning, covering a total distance of 3,046.1 knots in six days and thirty-one minutes. This eclipses all previous records. The average speed was 21.8 knots per hour. The run of each day was as follows: 493.1, 524, 516.9, 525.1, 530.8 and 456.2, total distance, 3,046.1 knots.

TO RECEIVE LL.

Great Preparations Going on in Philadelphia.

PHILADELPHIA, Aug. 19.—The final arrangements for the reception of L. L. Hung Chang during his stay in this country were announced here today by Major George W. Davis, United States army, who came to Philadelphia and conferred with ex-Minister to China John Russell Young in reference to the entertainment of the distinguished visitor.

(Continued on Fifth Page.)

HINTS ON PRUNING AND HANDLING.

Experienced Planter Writes of
Hawaiian Coffee Growing.

COFFEE DISTRICTS COMPARED.

Quite Marked Difference Between
Kona and Oluaa—When and How to
Prune—Instruments to be Used.
Suggestion to Small Planters.

Although every intelligent man interested in the cultivation of coffee in these islands is familiar with the object of pruning a coffee tree, many of them, I will venture to say, have never had any practical experience in the work itself. May I ask you, therefore, to grant me the favor of a little space in your valuable paper, to give a brief description as to how the works which form the heading of this article were carried on in Ceylon, with some hints as to the manner in which such operations should be modified to suit the requirements of the coffee tree in Hawaii.

What little knowledge I possess on the subject was derived from practical illustrations in the field, from competent coffee planters of many years' standing in that island.

I must add, however, that there is as much diversity of opinion among coffee planters in some of the details of their business as exist among the medical profession.

At the same time, the principals upon which all their works were based are sound, and are the outcome of many failures and long years of patience and perseverance. It must be duly considered, however, that the experience of one country cannot be applied to another without certain modifications being made to suit the altered and local conditions of a new district.

No hard and fast rules can be laid down for either pruning or handling, for no two districts are alike. There is as much difference between Kona and Oluaa, in conditions as affecting the growth and development of a coffee tree, as would be found on drawing a comparison between Ceylon and Hawaii.

With an experience in both districts I am convinced that the mode I should adopt for pruning and handling a tree in Kona would not be suitable to Oluaa and vice versa. For instance, in the former district from two to three handlings in the year would be sufficient, whereas in the latter the trees would require from five to six. I know of one place which I pruned where new secondaries were reproduced so rapidly, and such clusters that they required removing regularly once a month. The manager at present on that plantation can corroborate this statement.

A great many, if not all of the planters, possess some work on coffee planting, and it is a singular fact, that the greater number of such books, while referring to coffee in other countries, treat on the industry in Ceylon in particular. Among some I have seen I may mention E. P. Hull, Sabonadene, Lock, Arnold, Walsh and the Coffee Planters' Manual.

Although these works are all very good in their way, and afford many useful hints, mere books knowledge by itself is of little value to the would-be coffee planter. The old saying, "A little knowledge is a dangerous thing," applies with equal force in the present case. A man might read up all the books published on the subject and yet make a failure of coffee planting in Hawaii. Ordinary intelligence, with good common sense, coupled with powers of observation, and above all, patience and perseverance, will do more towards attaining success than all the study in the world. With this digression I will now return to the subject of this article.

The object of pruning may be summed up as follows: To reduce the tree to convenient limits in order to facilitate the operation of picking or harvesting. To encourage the tree to divert its energies in producing berry, in such manner as to obtain regular and uniform crops; and last but not least, to prevent loss of vitality and consequent exhaustion by overbearing.

Handling is resorted to from time to time, with the object of suppressing all superfluous growth, which makes its appearance after topping and pruning. Both these works should be carried out regularly and systematically every year, even at the sacrifice of weeding if labor is scarce, for the latter can be deferred, whereas the former must be performed at the proper time or neglected entirely.

The first work which demands the attention of the coffee planter is that of "topping." The height at which trees should be topped, and the time when they are ready for the operation, is a matter of considerable controversy among planters. In Ceylon it was the custom to top at from three feet six inches to four feet, though in some cases, trees were allowed to attain a height of four feet six inches, while in others, they were topped as low as three feet, due to an exposure to wind. In Oluaa, high topping seems to be in favor, many of the plantations adopt-

ing six feet as their standard and in some instances, even as high as seven feet has been maintained.

Now the question which naturally presents itself. What is the extreme limit that should be allowed to produce the best results?

Coffee planting being yet in an experimental stage so to speak no results of any importance having so far been produced from the numerous plantations under various modes of treatment, the question is rather a difficult one to answer. Experience in other countries however, has clearly demonstrated what are the results from low and high topping. Still, I am of the opinion, that the matter is not one of mere fancy or experiment, but should be decided by the circumstances of each particular case, with regard to the climate, rainfall, etc., as affecting the development of the trees and their productivity and especially in the distance apart at which they are planted.

In wet districts, such as Oahu for instance, where the trees make a rapid and luxuriant growth, and have a tendency to put forth an abundance of wood I should advocate low topping with numerous handlings, in order to produce a stock tree and divert its energies to forming berry. In Kona, where the conditions are entirely different, high topping might perhaps be resorted to with success, but I should certainly place the limit at five feet.

The result of allowing trees to grow to a height of six or seven feet, and then topping, almost invariably produces a tree with a slender stem towards the extremity, with long whippy primaries on top. This is forcibly illustrated in a patch of coffee, planted by Wm. Suter, in the woods above Hilo, on the Volcano Road, where the trees appear to have been topped at heights averaging from six to eight feet. Any one visiting this patch, taking particular notice of the form of the trees and the style of the primaries, can form a very good opinion for himself of the merits of high topping.

Turn from this picture to that produced by the coffee of the Messrs. Goudie Bros. on the Catholic Mission lands in Puna, planted by Roderic Ross, and what is the result? Here is a field of coffee of 30 acres, planted at 6x6 feet apart and topped at four feet, which for uniformity in appearance, healthy and stock growth of the trees, with vigorous primaries set close together, I have no hesitation in saying, for its age, is the finest field of coffee in the district, and reflects greatest credit on Messrs. Ross and Goudie for the manner in which it was planted, and the efficient state in which it is maintained. I understand the latter gentleman to state it was not two years old, and yet at the time of my visit, the trees showed a crop well advanced towards maturity, which I estimated at from 1500 to 2000 lbs. It would not surprise me to hear that next year's crop will average one pound to the tree. The elevation of the plantation is between 600 and 700 ft. above sea level, and the formation of the soil is "aa-aa," very similar to the lands in Kona.

The whole argument of low and high topping resolves itself to this. To maintain a tree with a given number of primaries, for the production of new wood, situated at a convenient distance from the surface of the ground to facilitate picking operations; and to bear regular and uniform crops, without over taxing the energies of the tree. Is this result to be produced by trees planted at 6x6 ft. apart, 1210 to one acre and topped at 4 ft. or in those set out at 8x8 ft. apart, 680 to one acre, topped at 6 or 7 ft? Will the latter method produce more crop per acre than the former? Until this point has been settled by actual experiment in Hawaii, the subject of topping, like that of the distance apart at which trees should be planted, will remain a debated question, and must be left to the intelligence and common sense of each individual planter.

TIME OF TOPPING

We now come to the proper time and manner in which the operation should be performed. I have heard it stated by some planters that a tree should not be topped until it has grown considerably above the height required, in order to allow time for the formation of the bark. For my part, I cannot see the force of such an argument. If one were to wait for the formation of bark on the wood which has to be removed by pruning and handling, these operations could not be performed at all. What applies in one case will not certainly do so in the other. The proper time therefore to perform the operation, is when the tree has arrived at the desired height, or say six inches above, when it can be easily accomplished with the knife or shears. The idea of leaving on two or three feet of unnecessary wood, is not only a loss of time, but subjects the tree to a considerable waste of energy in producing and maintaining a mass of useless branches which eventually must be removed.

Topping is performed in two ways, either by cutting the top of the tree off, or by removing the branches and leaving the stem standing. The latter method is the one to be recommended, as it allows the tree to continue to grow and produce fruit, while the former method leaves a large mass of dead wood on the tree, which is a source of danger to the fruit.

EFFECTS OF TOPPING

The first effect of topping is to remove the top of the tree, which is the source of the primary branches. This operation is performed by cutting the top of the tree off, or by removing the branches and leaving the stem standing. The latter method is the one to be recommended, as it allows the tree to continue to grow and produce fruit, while the former method leaves a large mass of dead wood on the tree, which is a source of danger to the fruit.

repeated from time to time until they cease to grow. The knife or shears, should never require to be resorted to on a well managed plantation for at least they only encourage a further growth.

Handling consists in addition to the suppression of suckers as above described, in the removal of all secondaries, tertiaries, etc., not intended for the production of the following year's crop. It also comprises the systematic reduction of all growth within a radius of six inches from the stem of the tree from top to bottom, to admit of light and a free circulation of the air. This work must be carried out at stated intervals, and should be done when the secondaries are quite small, by the aid of the hands only, when they can be removed carefully without injury to the bark. If from any cause this work has been neglected, and the secondaries have attained a length of six inches or more, they should be removed with the knife, and not wrenched off by hand, which process will most assuredly strip off a portion of the bark from the primary and damage the tree.

As to how many handlings may be necessary during the year, and when this work should first be commenced, as already stated, is a matter which must be decided by the indication of the trees themselves. In some cases, with the exception of the removal of suckers, superfluous secondaries and all tertiaries, no handling of any proportions may be required until after topping and the first pruning.

Some planters maintain as the maiden crop is, or should be produced on the primaries, that all secondaries, etc., should be removed as soon as they make their appearance, and not allowed to grow at all while the first crop is maturing. If such a plan be strictly adhered to and maintained, where do planters who advocate such a course expect to harvest the crop in the year following? For all pruning operations are carried with a view of producing each successive crop on new wood. As I have stated before, no hard and fast rules can be laid down for such work; but each individual planter must rely upon his own judgment and common sense.

It should be the case that trees in a certain district, from elevation and an excessive rainfall, have a tendency to run to wood, and produce a mass of secondaries and tertiaries, and the planter is satisfied that a loss of vitality is taking place with a sacrifice of crop; then under such circumstances, a judicious suppression of the secondaries might prove beneficial. He must bear in mind, however, that when the proper time arrives, he must make provision for the following year's crop, by having alternate secondaries, as regularly as circumstances will permit on all the primaries. Further remarks on handling will be treated later on in their proper place after the first pruning operations have been completed.

PRUNING.

Immediately after a crop has been harvested the work of pruning should be commenced and carried out as rapidly as is consistent with thorough work in order to complete it if possible before the season sets in. In some cases, and in some districts, however, this will be found impossible. It will be necessary, therefore, to suspend operations when the trees are in flower until the blossom has set, and complete the work even at an apparent sacrifice of crop.

The pruning of a coffee tree is based upon somewhat similar principles as those of the fruit men in California when pruning their orchards or their grape vines. It consists in the removal of all decayed wood and useless branches, also those growing in a wrong direction, and all wood which is past bearing.

The planter must always remember that in pruning operations he must have two years in view, or rather two crops, that is, in addition to the coming crop; he must look a year ahead and make provision for the wood which is to blossom and bear fruit in the year following the one in which he is pruning. For instance, in the district of Kona, at the lower elevations, the crop would be all harvested in December or the early part of January. Now it is obvious that the branches on which the blossom is to appear in March and April, to produce the crop of that year, must already be on the tree and well matured, therefore one branch will be growing while the other is bearing.

The first operation in pruning is to thin out the center of the tree. Commence by taking off by hand all the growth within a radius of six inches of the stem, as described for handling, that is, all such as are small, any thick branches must be cut with the knife. Next take each primary in its turn working from the stem to the extremity, and remove first all branches growing in a direction towards the center of the tree, all those growing vertically upwards or downwards, and any which may cross one another or interfere, and as a rule all tertiaries.

Arrived at this stage, you will readily see where your cutting work is to be performed, and how much wood to leave on, and what to take off, as also make provision for the wood which is to bear the crop of the year following. Now proceed by removing all dead and decaying wood, then all branches which are past bearing, or from which last year's crop was harvested. These ought to be on alternate sides of the primaries, those on the opposite sides having been trained to produce the coming year's crop. Examine the extremity of the primary, and if it is black, injured or decayed, shorten it off, then back by cutting it off close to the first healthy secondary. Any branches that may be broken or twisted out of shape should be cut back to the sound wood close to a healthy secondary. Continue the operations, those described with the primaries, being carefully around the tree, and do not overlook any branches which are intended to come off. It may be possible to remove some of the dead wood, but if it is not possible to do so, it should be left until the next year's crop is harvested, when it can be removed with the knife.

In Ceylon, my superintendent who could not get to print or handle an estate under his charge would be considered on the same light with the one who had to harvest his crop when ripe, and would have received a prompt discharge.

ondaries for that year's crop. It will be time to train alternate ones on the opposite side of the primaries for the crop in the year following.

The result of pruning a coffee tree is somewhat similar to that caused by topping; numerous secondaries will make their appearance, sometimes in clusters of two and three, especially from the joints where branches have been removed by the knife. It is at this stage and at subsequent intervals, that the importance of systematic handling can be appreciated. If all such growth were not promptly removed they would develop until the coffee tree became a dense thicket, with a mass of distorted branches growing in all directions, impervious to both sunshine and air; the suckers would become gormandizers, and all the energies of the tree, which by the laborious pruning had been directed towards the formation of berry, would be lost. Handling, therefore, must be carefully carried out as often as may be required, which to a great extent will depend upon the nature of the season and the local conditions of the climate in which the plantation may be situated.

The style of handling now required is precisely similar to that previously described, only it will be more extensive and will require close supervision to see that the work is properly done, for there will be an abundance of fresh wood which must be removed.

Proceed in the same manner as before—by first thinning out the center of the tree; then turn your attention to the primaries, each one in its turn, and take off all the fresh secondaries which have made their appearance since pruning, especially where the knife was used, where they will be found in clusters, care being taken, however, not to disturb those trained for next year's crop. Should any of these prove to be sickly, or weak, they may be substituted by allowing a healthier one to take their place, and the weaker one should be removed with the knife if necessary. Now look along the secondaries which are from bearing wood for this year, and unless they are deficient in foliage remove all the tertiaries. Should a gap occur a tertiary may be left to fill the space.

In handling along the secondaries great care must be exercised not to disturb the crop, or spike, should there be any on the tree. In fact, in all pruning and handling the greatest care is required so as not to injure branches by undue haste or careless treatment. It is far better to take more time and accomplish a less number of trees during the day, than to rush the work through with a view of reducing the cost per acre. Neither of the foregoing works should ever be given out in contract, or performed by task work. No matter what it costs, the work should be carried out by day labor, with the most intelligent men in the gang, and under close personal supervision.

It may be asked, how are Japanese laborers to be trained to carry out such particular work?

In reply to this question I will ask another. How were the coolies in India and Ceylon broken in to pruning and handling of coffee estates? Yet such was the case, and I can remember certain coolies who could perform the work as well as myself, if not better. They had to be taught by degrees, commencing with a few of the best men, who after a while would help by imparting their knowledge to others. I admit it requires a good deal of patience on the part of the overseer or manager; and it is needless to say he must have a thorough knowledge of the work himself. If it was possible, therefore, to train the Tamil coolie to do the work, I can see no reason why there should be any more difficulty in breaking in the Japanese to do likewise—some of whom are just as intelligent, if not more so.

Moreover, although it may appear somewhat elaborate, it is not really so, provided the plantation is taken in hand from the start, and all the various details in the work are carried out at the proper time.

If a plantation has been neglected, then it is a very different thing. I have seen some trees myself which I should be very sorry to tackle. It would be really hard to know where to begin. The only advice I can give to those who may be unfortunate enough to be encumbered with coffee trees in such a state, is not to attempt to bring them back to shape at once, for the shock would be more than the trees would be likely to stand. Moreover, what little crop they might have would require to be sacrificed. It will require at least two years, and perhaps three, if the trees have been neglected for several prunings. As the object of this article is to prevent any such calamity, I will not enter into details as to how it is to be remedied, but will be pleased to supply the information at any time should it be desired.

PRUNING INSTRUMENTS

In regard to the instruments required, all that is necessary is an ordinary pruning knife and a small saw. Shears may be used but with some experience I have had lately with shears, I consider the knife is preferable, for all branches should be severed with a clean cut, and as close to the primaries as possible, which cannot always be done by the shears. All large branches are treated with the saw first, then trimmed with the knife.

I cannot be too forcibly impressed upon all those interested in coffee culture that when once a tree has been topped, pruning supplemented by systematic and careful handling, form the most important and scientific work the planter will have to contend with—failure to perform which will bring ruin and disaster on the most carefully laid out plantation.

In Ceylon, my superintendent who could not get to print or handle an estate under his charge would be considered on the same light with the one who had to harvest his crop when ripe, and would have received a prompt discharge.

Without pruning and handling there can be no hope of a good crop. All the energy of the tree will not be remedied by the use of a short waste of time and money to apply manure to the trees, which were a mass of wood and decayed branches, and would be likewise a failure to attempt to do any work in a plantation overrun with weeds.

certain well defined conditions must first exist on the plantation to be treated. As this, with the expenditures and cost of various works, will form the subject of my next article, I will say no more at present.

Before concluding, there is one piece of advice I should like to offer to small planters, or those who are not prepared or have not the means to undertake the work as described in this article. Do not top your trees, but allow them to grow to their natural height. You will undoubtedly experience some difficulty and inconvenience in harvesting your crop, but after all, that is preferable to having none to pick.

AULD REEKIE.

SOME OAHU CANAIGRE.

Splendid Results From Ranch of Armstrong & Andrade.

Good Tubers With Plenty of Tannin. On Exhibition at Pacific Hardware Store.

Another evidence of the capability of the soil of Oahu to produce good products was brought to this office on Wednesday in the shape of a basket of canaigre roots from the ranch conducted by Messrs. Armstrong and Andrade.

There were ten large tubers, measuring all the way from three to ten inches in length—good, healthy looking roots, every one of them, and all the product of a single plant.

The boys are now busy transplanting the plants from the eight-acre nursery, and the collection of tubers sent to this city is said to be a good average of the product found in every hill of the nursery. The field that is now being cultivated includes some sixty acres, located a few miles from Pearl City, along the Waiwala road. The land had previously been regarded as practically useless, but it seems to be just the place for canaigre. There is every reason to believe that the larger fields will yield a plant that will equal the nursery product, both in size and the amount of tannin contained. In fact, upon the amount of tannin contained in the tubers the success of the canaigre industry in this country depends. The tubers from the nursery have been analyzed and found to be fully up to the standard, which will make the cultivation of the plant one of the best paying industries of the country. Furthermore, experiments have been made in tanning leather with the Island product, which have been equally successful. A sample of the leather, together with the canaigre has been placed on exhibition in the window of the Pacific Hardware Company.

The young men who are conducting the ranch are bright, hard working fellows and deserving of every success of which their efforts now seem to give promise.

THE OLD GREEKS

Had an eye for the beautiful. The Greek word Kosmos, taken in one sense, means ornamental; while Kosmetikos translated means skilled in decoration; and Kosmeo means order. For this reason the name . . .

COSMEON WARE

... has been given to a line of pure Aluminum goods that we handle comprising,

Hair Brushes, Combs, Hand Mirrors, Trays for the Toilet Table, And innumerable small articles

usually made in silver at higher prices. The entire surface of these articles is unchangeable, and never tarnishes, even should it come in contact with water. The articles have the appearance of frosted silver, and are as light as a feather. All these qualities taken together give the ware that delicate grace that lovers of the beautiful admire so much. The engraved part is all hand work by skilled artisans. The filigree ornamentation, in point of style, is unique and classed with high art.

COSMEON WARE is just as wonderful as the aluminum it is made out of, and the world is never done talking of the wonderful qualities that valuable metal possesses. We have a large assortment on hand, tastefully laid out for inspection. Just the thing for presents to sweethearts and wives.

LONG SESSION OF BOARD OF HEALTH

Matters of Considerable Importance Under Discussion.

THE QUESTION OF A WATER RIGHT

Reports from Various Inspectors—Petitions from Different Sources—Baths for Kalaupapa—Spiritual Consolation for Lepers at Kalihl station.

The Board of Health met at 3 p. m. yesterday. Present, W. O. Smith, president; Drs. Day, Wood, Emerson, and Messrs. Kellipio, Lansing, C. B. Reynolds, Executive Officer; Dr. Alvarez and Dr. W. T. Monsarrat.

Dr. Monsarrat reported the inspection of 143 bullocks killed. Any that were at all infected were condemned. Under the Act to Mitigate, seventy women were reported examined. Inspector Kellipio reported 48,374 fish examined.

The report of the Superintendent of the Insane Asylum showed seventy inmates, as follows: Hawaiians, 22; Chinese, 20; Portuguese, 28.

Mr. Lansing, from the Insane Asylum Committee, reported a request from Mr. Cutter for wiring the building for electric lights.

President Smith suggested that as the expenses of the Asylum must be closely guarded, Mr. Rowell had better go over and investigate.

Dr. H. W. Howard reported 2,764 patients treated at the dispensary during the last quarter; 735 health certificates issued to school children and 2 denied, and 3 lepers apprehended.

Superintendent Meyers of the leper settlement reported that the site for the new bath house had been selected and that work would soon begin. He also stated that there had been considerable sickness at the settlement, but it had passed over.

An application from Dr. R. H. Brown for license to practice was referred to the Board of Examiners, and he was so notified.

The following interesting letter from Dr. Gregory Jordan, medical inspector at Kobe, Japan, was read:

Hong Kong, 1st August, 1896.
To the Hon. Henry E. Cooper,
Minister for Foreign Affairs, Republic of Hawaii:

Sir:—I have the honor to inform you that since the date of the departure of the last steamer for Honolulu up to the present and embracing a period of 20 days, there have been 26 fresh cases of plague reported and 22 deaths. I regret extremely to state that during this period one European, Sister Catherine McIntosh, has been attacked with this disease. Sister Catherine was one of the most indefatigable workers during the severe epidemic of 1894, being in constant attendance on the sick at the Plague Hospital at Kennedy Town, but was not affected then. Again this year she has been constantly nursing at the Plague Hospital, but has now been attacked by the disease. I am glad to report, however, that she has passed the crisis and is on the fair road of recovery.

The period embraced in this report has been in other respects uneventful as to health statistics. The usual number of malarial fever cases occur, but owing to the extreme drought bowel complaints are very rare.

We have lately experienced a period of extreme heat, the thermometer standing as high as 94 deg. Fahr. in the shade of offices in the city. So high a temperature is unprecedented and unknown to the oldest residents of the Colony. I regret to state that this extreme heat has been attended with several casualties, there have been a few fatal cases of sunstroke (Heat Apoplexy), both in the harbor and on shore. Two of these fatal cases have been attended with extreme temperatures of 109 deg. and 108.6 deg. Fahr. in the axilla, and both fatal within a very few hours.

The Colony is at present suffering from the effects of a severe Typhoon which passed over the city on the night of the 29th instant and has put a severe strain on the scavenging work of the city. The streets being spread with broken branches of trees and foliage, together with blown down tiles from roofs of houses, etc., and along the Praya the streets being cut up by the continual wash of the sea spray.

In conclusion, I beg to attach a memo of the daily number of Plague cases and deaths during the period of 20 days embraced in this report.

I have the honor to be, sir,
Your most obedient servant,
G. JORDAN, M.S.,
Sanitary Inspector at Hong Kong to the Republic.

A petition signed by several residents of Nuuanu, objecting to the opening of a ditch that was closed during the

cholera time, was presented to the Board. President Smith reported the circumstances connected with the closing of the ditch.

Dr. Wood said the Board was in a rather happy position. The ditch was a nuisance and was closed. No suit for damages could be brought against the Board in consequence. If the ditch was opened again it could be closed by the same means.

Mr. Lansing thought the position taken by the Board was correct; such a place is bound to become a nuisance through leaves collecting and remaining in the ditch.

Mr. Reynolds reported finding in two places where closets and cesspools emptied into the stream. He believed the place would continue to be a nuisance unless watchmen could be placed there to see that the ditch was kept clean.

Dr. Wood thought the matter could be remedied by cementing the ditch.

Dr. Day said the Board was in a position to say that the ditch could be opened under certain conditions, which were that the ditch could be cemented or tiled at the expense of persons through whose land the ditch runs. If it is opened as it was before it would be a menace to public health.

President Smith suggested that Mrs. Foster be notified that if the ditch is opened and maintained as it had been prior to its closing, it would be considered a menace and would be closed.

President Smith showed by a copy of a letter sent Mrs. Foster in October, 1895, that permission was given her and others to use the ditch under certain circumstances.

It was decided by the Board to notify Mrs. Foster and other property holders on the line that the ditch could be used only on condition that it pass through a pipe that will guarantee a flow of water uncontaminated by organic matter.

The petition of a Chinese whose wife is at the receiving station to allow her to return to her home at Koolau during her present illness from fever, and to then remove her to China as soon as she recovers, was laid over for a week.

Petition of Dr. George Herbert for a leave of absence was granted.

Request from W. J. Lowrie, manager Ewa Plantation, that Dr. Weddick be appointed an agent of the Board of Health at Ewa. The secretary was requested to notify Mr. Lowrie that reasons must be given for the request before action can be taken.

Petition from Father Clement for permission to visit the receiving station whenever he had occasion to go to Kapolani Home for Girls was referred to Dr. Alvarez, with the understanding that those not bedridden be allowed to attend chapel when the clergyman called there.

A communication from Dr. Alvarez relative to vaccination was read. It contained strong suggestions for enforcing vaccination among the people on the Islands, inasmuch as arm to arm vaccination is prohibited by law. The paper was handed in duplicate to Drs. Day and Emerson to make such changes and additions as in their judgment may be beneficial, and to report at the next meeting of the Board.

The president announced that Dr. Hildebrand had been appointed physician to issue certificates of health to female pupils in the public schools.

The matter of health certificates to children in private schools was discussed at length, and it was decided that where a pupil of such private school visited the office of a Government physician for examination there should be no fee asked. If the physician visited the private school for this purpose he shall be allowed to charge a reasonable fee for the service.

HORSELESS VEHICLES.

John Cassidy Believes They Will be in General Use Here.

John Cassidy, superintendent of the Government electric lights, is one of the Honoluluites who waxes enthusiastic on the subject of horseless vehicles. In a conversation the other day he remarked that "of all cities he had ever visited none could excel Honolulu for that character of carriages. The streets and roads are adapted to them and believed it was a question of but a short time when they will be in general use here.

"The mill have a beneficial effect in many ways," he said, "and the public will not be slow to recognize it. Rents of residences in the city proper will come down, because with the aid of one of these carriages a man can live with his family on the outskirts of the city and not be under the expense in keeping a horse. As an inducement for people to live in town property owners who lease their houses will have to reduce the rents.

"It would not surprise me at all," he added, "to see the prices of these new ideal means of locomotion be so reduced that almost any family could own one, nor would it surprise me to see them manufactured in Honolulu. No. Electricity need not be the motive power, coal oil and gasoline are cheaper, and perhaps safer. In Chicago, recently, during a race by horseless carriages one propelled by one of these won against those by electricity. Their cost, too, is much less.

"I have great faith in the scheme," he said in conclusion, "and as soon as they are proven a perfect success in other cities they will be used here. The people in Honolulu are reasonably progressive once they see an article that has merit. History shows that during the past decade they have not turned their backs on innovations."

Morrow in Jail.

W. P. Morrow, who was released on bond some time ago pending trial in the Circuit Court on the charge of assault on Pat Curtis, was yesterday evening surrendered by his bondsmen, Messrs. Hawkins and Mackenzie, and was immediately arrested and locked up.

EDUCATORS IN WEEKLY SESSION

Bureau of Education Met as Usual Yesterday.

MORE APPLICATIONS FOR PLACES

Select School Wanted at Kohala—J. L. Dumas Makes Sundry Requests—Admissions Wanted at Pepeekeo School. Repairs Needed at Lahainaluna.

At the regular weekly meeting of the Board of Education, held yesterday afternoon, there were present President Cooper, Mrs. B. F. Dillingham, Mrs. E. W. Jordan, Professor Alexander, H. S. Townsend and J. F. Scott.

The Board, having received notice of the death of the little daughter of W. A. Bowen, a member, instructed the secretary to express its sincere regret and sympathy.

President Cooper announced that the contracts for building the Royal and Maemae schools had been awarded and that the work would begin as soon as possible.

Osmer Abbott of Lahainaluna dropped in at the meeting and gave his ideas on the water rights at the school of which he is principal. He asked that the matter be further considered. Although the Board came to no definite decision, it seemed to be the sense of the meeting that in case of sale to the plantation the water reserved should be measured.

Inspector Townsend reported that he had authorized Professor Dresslar to procure an additional teacher for Lahainaluna school. This action was approved by the Board.

President Cooper read a letter from residents of Kohala, Hawaii, asking that the Government establish a select school at that place, they paying part of the teacher's salary in the form of tuition. The Board decided that since the law requires that all tuition fees go in as Government realization, the Government could not extend its aid in the matter.

Miss Margaret Walker of this city was granted an extension of one year on her teacher's certificate.

J. L. Dumas made several requests of the Board, which were laid aside for consideration at the next meeting. The main one was that the vote consigning rooms in the third story of the High School building to him be reconsidered. He stated that his pupils were obliged to go over to the Royal School for certain exercises, and that after the walk to and from this place they should not be made to walk up three flights of stairs to the upper story of the High School building.

A letter from Miss Isabel Coan of Tacoma, for a position as teacher in the lower grade schools of the Islands was read and filed.

President Cooper read a letter from the manager of Pepeekeo Plantation to the effect that an addition to the present school building in that place was very badly needed on account of the increase of children who had reached the school age. He wrote as if he was very much interested in the matter of the education of the youth, and said that he would take upon himself the responsibility of putting on the addition at the very lowest rate possible. Mr. Townsend assured the Board that the matter could be left in no better hands. It was then voted that the sum of \$400 be paid out for extension of the school house at Pepeekeo.

In speaking of Lahainaluna, Inspector Townsend in his enthusiasm said:

"Yes, they do need repairs and improvements on the school building at that place. Why, you can stand and knock the shingles off the roof with your fist. I tell you it is too low altogether."

Then remarked President Cooper with a smile:

"I believe you drew the plans for it yourself, did you not?"

Answer echoed:

"Well, now, come to think of it, I did."

At 4 45 p. m. the Board adjourned, after being instructed that there would be another meeting for the transaction of important business at 2:30 p. m. on Friday.

A Remarkable Cure for Chronic Diarrhoea.

In 1862, when I served my country as a private in Company A, 167th Pennsylvania Volunteers, I contracted chronic diarrhoea. It has given me a great deal of trouble ever since. I have tried a dozen different medicines and several prominent doctors without any permanent relief. Not long ago a friend sent me a sample bottle of Chamberlain's Colic, Cholera and Diarrhoea Remedy, and after that I bought and took a 50-cent bottle, and now I can say that I am entirely cured. I cannot be thankful enough to you for this great remedy, and recommend it to all suffering veterans. If in doubt, write me. Yours gratefully, Henry Steinberger, Allentown, Pa. Sold by all druggists and dealers. Benson, Smith & Co., Agents for H. I.

The S. C. Allen will be through discharging his cargo of general merchandise about Saturday.

From a statement just issued by the British Board of Trade it appears that in 1894 the United Kingdom produced 188,277,000 tons. Germany, 76,741,000. France, 26,964,000. Belgium, 20,534,000. Australia, 9,573,000. Japan, in 1893, 3,371,000, and the United States, 152,148,000 tons of coal. Canada produces between 3,000,000 and 4,000,000 tons per annum, and in addition imports about half her total consumption, principally from the United States.

AGENTS FOR HAWAIIAN ISLANDS:

HOLLISTER DRUG COMPANY Limited.

What Is PURIFINE?

It is the new disinfectant which has superseded all other disinfectants, being a scientific compound, having no odor, yet possessing the qualities of a powerful disinfectant.

The automatic distributor should be placed in every house in Honolulu where odors and germs of disease exist. They are placed free of charge, taken care of and kept working day and night for \$1.00 per month. It's an innovation, but on scientific principles, and appeals to everyone of common sense. The idea is this: The distributor drops two drops a minute, day and night. Foul odors are killed, yet no disagreeable smell of carbolic acid or crude disinfectants takes its place. You don't know that a powerful disinfectant is being used if you judge by the lack of odor. But it's doing the duty—doing it well. Can we show you the "Ideal Automatic Distributor"? Our Mr. Washburn will call, if you'll telephone to

Island Orders Promptly Filled.

Hawaiian Gazette.
SEMI-WEEKLY.
ISSUED TUESDAYS AND FRIDAYS
W. R. PARRINGTON, EDITOR.
FRIDAY, AUGUST 28, 1896.

Now that the American League has changed its constitution, the best thing it can do is to change its name. A distinctly American organization that includes all nationalities, whether naturalized or not, is a complete misnomer. If not indeed approaching a stage of gross foolishness.

The catalogue of Oahu College, recently published, and copies of which will be forwarded to the United States by the next mail, is one of the best pamphlets of the kind that has ever been issued in this country. It is an evidence of the progressive character of the institution, and sets forth in interesting detail what is being done to place the best educational advantages at the disposal of the young men and women of this country.

Kalulani rumors have been spreading about the city at a great rate of late, and statements increase in their positive character as they have passed from mouth to mouth among the Opposition. The rumors are so thoroughly devoid of official foundation that we will not attempt to refute them, except to notify the active rumorologists, whose desires are possibly father to their thoughts, that any person or collection of persons, of this country or any other country who make an attempt to create a change in the present order of affairs will be obliged to face 2,000 or more men who can do their talking with rifles if necessary.

The result of the work Messrs. Armstrong and Andrade are doing on their canaigre ranch is a good example of what young men with plenty of energy, fair capital and no fear of hard work can do in this country. We hear from them no complaints as to the impossibility for white men to work under the "hot sun of the tropics." They have started out on a venture that entails plenty of hard "bone" work, and there is every prospect that they will meet with success and demonstrate that more than one agricultural industry can thrive on these islands. As pioneers in a new industry they are entitled to a great deal of credit.

The electric weed killer is one of the latest productions of electrical genius. The machine has been put through the experimental test by the Illinois Central railroad and has proved effective though rather expensive. The apparatus consists of a wire brush about ten feet long and four inches wide, suspended by a frame from the end of a flat car on which is placed a dynamo, the necessary transformers and other electrical equipment. Steam is furnished from the locomotive to operate the dynamo. The brush, charged with electricity, is moved slowly along in contact with the vegetation, the theory being that the current will leave the brush, enter the plants and by destroying their cellular tissue destroy their vitality. In the experiments made the plants with which the electric brush came in contact were found to be dried up and quite dead the following day.

President Cleveland, in his latest proclamation warning the citizens of the United States against violation of the neutrality laws, says that any combination of persons organized in the United States for the purpose of proceeding to and making war against a foreign country with which the United States is at peace, and provided with arms to be used for such purpose, constitutes a "military expedition or enterprise" within the meaning of the neutrality laws, and that the providing or preparing of the means for such "military expedition or enterprise," which is expressly prohibited by said laws includes furnishing or aiding in transportation for such "military expedition or enterprise." We are pleased to note the flat-footed manner in which President Cleveland declares himself, but it is strange that he failed to discover this interpretation of the law some twelve or fourteen months after the Wahlberg affair.

One of our correspondents suggests that now the opera house has been completely renovated and is to all intents and purposes a new structure it be given a new name. This is by no means an entirely unimportant suggestion, although the matter of a name is not a question of supreme importance. The first went under the name of Music Hall and later was given the name of the Royal Hawaiian Opera House. Doubtless the old title would serve every purpose, but we are inclined to suggest a pleasant name for a gentleman to whom the city is indebted for the modern reconstruction of the building.

Mr. Irwin has spent his money without stint and has given the country the best the market affords. The past record of the opera house in this country has not been such as to warrant any man building as a financial investment. The time and money Mr. Irwin has expended is practically a gift to the community, and the least the people who profit by his liberality can do is to associate his name with this feature of Hawaiian progress in which he has been the prime mover.

The biggest stir this Puritan place has had in many a year was caused by the appearance this morning of the first number of the Sunday edition of the Daily Star. All the up-to-date population heartily indorse the advance step, but the enterprise is bitterly denounced by a number of the church party. The Star people are serene. They find they have made a hit, and in answer to censure point to the publication of the old missionary paper on Monday mornings, necessitating all Sunday work, and to the Sunday band concerts and Sunday target shooting lately indorsed by the Government. An attempt will be made to stop the Sunday Star, but its managers announce that they intend to keep it up any cost in the way of defense in court.—Honolulu correspondent of the Chronicle.

Yes? Possibly some one connected with the paper "without strings" knows the author of the above. The statements made are entirely misleading, and misrepresent the Government as well as the community. As to the Sunday paper we have no fight, but it is about time a band was put around the head of one of our local correspondents.

INSPECTION OF SCHOOLS.

The hue and cry that has been raised against the health regulation that requires the school children and teachers to obtain a health certificate seems entirely unnecessary, and in fact not in keeping with the best interests of the community at large. The health conditions are such in many districts that it is quite necessary to keep a careful watch upon the children attending the schools, where they are thrown into close contact with each other in their play and also in the school room, where books and slates are exchanged promiscuously. Some people may maintain that they can see no element of danger in these facts, but at the same time there are still others who have quite as good a right to be heard who do see a possible danger arising from the mingling together of children of different nationalities and from homes where the sanitary precautions are not up to the usual standard of the more advanced Anglo-Saxon. This may be classed as the sentimental side of the proposition, but nevertheless the guardians of public health are positive of the necessity of protecting the school children, and their opinion is by no means based on sentiment.

Furthermore, the regulation of the Board is not necessarily irksome, since a certificate signed by any licensed physician is accepted. Those employing private physicians need have no fear of the interference of the Government officials. The Government physicians examine those who are unable to employ private physicians; and indeed the Government has gone so far as to employ a lady physician to assist in the school inspection, in order to allay objections that might be raised in many families.

Taken all in all, objection to the school inspection seems to be only the result of misguided judgment on the one hand and on the other the natural born tendency to endeavor to throw the light of misrepresentation upon any act of any department of the Government. The inspection is necessitated by the peculiar conditions that exist in the country, and those who object to the liberal interpretation of the rule made by the Board of Health are simply lending their voices to bring about a state of affairs that will react to their own detriment.

ROAD WORK.

A feature of the New Zealand department of labor which was not noted in our previous review in the department report, is the "Cooperative Works." In opening up new roadways the Government gives employment to such men as are desirous of obtaining land holdings in the immediate district. The commissioner remarks that it appears to be a fact that not only is the work as cheaply done, but as perfectly done as by the tender system. More work in superintendence is required from the Government officers, but the cost of the extra time spent by the staff in doing this is more than made up by the elimination of the middle-man's profit. The moral effect upon the workman should not be lost sight of, it is a pleasure to watch men working straightforwardly for themselves, and not with a continual glance over the shoulder at a master. While it might not be easy to incorporate in this country the New Zealand plan of taking up lands, there is a suggestion in the foregoing that may be noted with profit. In alloting the construction of the new roads in outside districts wherever it is possible preference should be given the men giving their time and

money to the development of lands along the roadway. Contract labor and prison labor serves its purpose in sections where the lands on either side have yet to be reclaimed, but in many districts there are small owners who regard a streak of good fortune as an opportunity to "earn wages" by labor on the roads. It is certainly good business proposition for the Government to aid these men as much as possible. Such a course puts money into the hands of a class of people who need it and as is remarked by the New Zealand commissioner saves the Government the middle-man's profit.

DEVELOPMENT OF OAHU.

Mr. Dillingham speaks a timely word in the interest of the Island of Oahu, as he can always be depended upon to do. There are those who will form the opinion that he paints the picture in too brilliant colors, but it is the men of ultra-enthusiastic ideas who have headed progressive movements in every country. There is no reason why the business men of Honolulu should hold to the idea that Oahu has reached its limit so far as its power of production is concerned, and there is every reason why they should favor the development of new agricultural industries here. Honolulu today is relying altogether too much upon the business gained from the other Islands. Its business men seem to forget oftentimes that the day is coming when in their trade relations the other Islands will become less dependent upon this port. But leaving this question aside, why should good, arable land, suited to the cultivation of sugar and coffee, to say nothing of canaigre and other products which the active mind of Commissioner Marsden may demonstrate the value of, be left for the cattle or lantana to roam over, when by the application of a little money and brains the land can be made to produce a good return? Oahu has the principal port of entry; it is in closer touch with the trans-Pacific trade than any other Island; it has a railroad that will some day tap every coffee gulch and sugar field on the Island, and the cost of handling produce will be much less than in any other district in the country. Why is it, then, that in opening up new districts the pioneer should fail to give this section of the country careful attention? Probably the answer is found in the general disposition of the Anglo-Saxon to seek out the larger fields in which to cut a dash, rather than center attention on matters in the close vicinity. It is for the interest of the Honolulu merchant to favor local development, as by so doing they are in the center of trade that cannot be diverted to other channels. They are now the center of the Island circle, but if they create an Oahu industrial circle, new strength is added to their position.

CANADIAN VIEW OF AMERICAN POLITICS.

In a recent issue of the Victoria Colonist the editor gives a review of the political situation in the United States. The article is of particular interest, since its author is by no means a neophyte in politics, and he views the struggle in the United States from a non-partisan standpoint. He is a thorough-going Canadian, but is nevertheless in close touch with the sentiment of the people across the line.

He starts off with the statement that the talk of the silver party gaining the day is by no means "mere brag," and unless the sentiment changes to a great extent, Bryan's chances of success are far from being merely fanciful. He notes that the New York Sun concedes to Bryan 166 electoral votes, while the Times concedes 176. It requires 224 electoral votes to elect the President, and according to the concession of the Times Bryan has only to obtain 48 votes to gain the day. The Colonist editor speaks of New York, Maryland and Maine as possibly silver States; but in this instance he seems to be reckoning a little wide of the mark. However, should the Democratic managers succeed in swelling the silver tide in Indiana, Illinois and California, the electoral votes of these States, together with those west of the Mississippi and South of the Mason-Dixon line, they would send Bryan as President by a good healthy majority.

After making his calculations, the editor proceeds: "The reader sees from this that greater wonders have happened in the political world than that the 'box orator' will be elected President in November next. The calculations of the New York Sun and the New York Times may be all astray, and the silver men may be building castles in the air, for there may be elements in the presidential contest of the existence of which they are entirely ignorant. But there is always this to be considered, that there is a probability that the changes which may take place between today and the 14th of November may be in favor of the silver men. The Populist cause, in any case it is not wise to regard the predictions of the advocates of free silver as absurd. We have seen that, according to the admissions of their strongest opponents, they have a solid

foundation on which to build their calculations and hopes.

There are those who may consider it impolitic in the Times, the Sun and other advocates of sound money and good government to admit that there is a chance of Bryan being elected. But there are many more who do not believe it to be good policy to be continually laughing at the calculations and predictions of opponents. They consider that it is far wiser to look the situation fairly in the face, and to give the other side full credit for the strength they are known to possess. Much more harm, they think, comes of underrating the strength of political opponents than of overestimating it. It is most important that advocates of sound money and rational government in the United States should know exactly the number and the magnitude of the difficulties that lie between them and success in the momentous contest in which they are now engaged. If they are convinced that it will require all their strength and all the resources of their patriotism to win the election, they will be sure to make all the sacrifices needed. This they would not be likely to do if they were confident of an easy victory."

GERMAN INFLUENCE IN JAPANESE LAW.

Japan, following out the spirit of modern progress that has obtained a firm footing in its official circles, has of late undertaken the revision of the civil and criminal legal code of the Empire, which has now been reconstructed on modern lines. This action gives added interest to a work published by Prof. Lonholm of the University of Tokio, in which the influence of European nations in the legal development of the country is reviewed. He divides the history of this development into two periods—the older French and the later German.

In the earlier days, when the French exercised the controlling influence, the Japanese were passive, trusting the construction of the legal code entirely in the hands of a French professor. Later, however, when the Japanese became more independent, thought and acted for themselves, they leaned more toward the basis of German ideas and ideals. In the first period the legal code was a faithful reflex of French methods and customs, while in the present code the German system has been taken as an example, and modified to suit the Japanese peculiarities. Prof. Lonholm maintains that "throughout the chain of islands from Riu-Kiu to the boundaries of Kamtschatka German civil law ideas and methods are in force."

While this may be regarded as extraordinary by many, the author states that it is only an evidence of the diminishing power of France in the Orient, and the steady growth of the German influence, which is slowly but surely crowding out the French that was predominant there for centuries. Another evidence of the growth of the German power is given in the fact that Prof. Rosler of the University of Rostock was selected to prepare a body of mercantile or business laws for the Empire. This system is described as essentially German, although dotted here and there with English and French elements.

MRS. WHILING WRITES.

Would Have Miss Field's Body Brought to Hawaii.

BOSTON, Mass., Aug. 11.—Miss Lillian Whiting, an intimate friend of the late Kate Field, returned last week from a European trip and today made public the following letter regarding a report that she had sent for Miss Field's body to be exhumed and forwarded to her here in Boston:

In the first overwhelming sorrow for the loss of the earthly presence of my most beloved friend when the tidings reached me in Paris and made me feel that "the world's great space held nothing but a vacant place," in this first shadow of a great grief, I wrote instantly to Miss Field's cousin and dearest relative, George Riddle, and also to Consul-General Mills at Honolulu expressing my earnest wish that the casket containing her mortal form should be brought to Mount Auburn and her grave be made beside her parents and other relatives buried there. This was merely an earnest wish, not a command, which I have no right to give; but when I came to know of that wonderful outpouring of love and devotion to Kate Field by the people of Hawaii then I came to fully concur with Mr. Riddle's decision that the casket should receive final burial in the lot of one of Miss Field's nearest friends in Honolulu. Mrs. Wilder, who wrote begging that this might be granted, and so the cousin who was dearest to her and other of her nearer friends have fully accepted this arrangement.

I have united with Mr. Riddle in letters to the San Francisco papers, begging that their action cease, gratefully as their interest is appreciated. To her grave I am soon to make my pilgrimage, to meet the friends whose tender devotion to her has so comforted those who knew and loved her here; to study the scenes whose beauty delighted her eye and often engaged her pen. I have returned from Europe in midsummer in order to the more quickly set off on this journey, one that though sacred should not be wholly sad. Kate Field's richly versatile genius translated to more favorable conditions will find its perfect flowering in the life beyond and her mortal form will lie undisturbed under that flower-laden tomb in Honolulu.

LILLIAN WHITING.
The Brunswick, Boston, August 11.

LUSTY FIGHTING ON CRETAN SOIL.

(Continued from First Page.)

itor. The Ambassador Extraordinary, with his suite, will arrive in New York on Friday, the 28th inst., and will be received on the following day at Governor's Island by the President. There will be a naval review and a great show of pomp. On Sunday Li will visit the tomb of General Grant and in the evening will dine with John Russell Young, George F. Seward, John E. Ward and other Americans with whom he became acquainted in China.

Settle Venezuela Affair.

LONDON, Aug. 14.—First Lord of the Treasury, A. J. Balfour, in the Commons today, replying to Harcourt, who requested information relative to the progress of negotiations for the arbitration of the Venezuela dispute, asking whether the apparent difficulty had been removed by the proposal of the United States contained in the dispatch of June 21st, said the Government was still considering the latest proposals of Secretary Olney, which are regarded as opening the way for an equitable settlement. Balfour added that the Government had every reason to expect the pending negotiations would lead to an early settlement of the dispute.

Possible Revolt in Philippines.

HAVANA, Aug. 17.—A majority of the Madrid press insists that there is still serious menace of a fresh revolt in the Philippine Islands, and the Japanese, for selfish reasons, are openly encouraging the dissatisfied native element in constant conspiracy against the Spanish rulers in the islands. The embers of revolution were apparently never extinguished after the last war. The Cortez in Madrid has urged the passage of an extraordinary budget to allow an increase in the naval forces in the Philippine Islands.

New Boat for the Cubans.

PORT HURON, Mich., Aug. 19.—The fast river steamer Unique, which has been running between this port and Detroit, has been sold by Crockett McElroy to an agent of the Cuban government. She will be taken to the coast in ten days. It is intended to cut her cabins down and turn her into a blockade runner. The price paid was not stated. The Unique was built with an eye to speed alone, and has made some wonderful time in the rivers.

Noted Scientist Dead.

BOSTON, Mass., Aug. 19.—Josiah Dwight Whitney, LL. D., professor of geology at Harvard, the oldest instructor of the university on the basis of length of service, and the most famous geologist of the country, died today at New London, N. H. He was appointed State Geologist of California in 1860, and conducted a topographical, geological and natural history survey of that State. Besides various pamphlets and reports, he issued six volumes on this subject.

Tennyson's Widow Dead.

LONDON, Aug. 10.—Baroness Tennyson, widow of the late poet laureate, is dead. She was a daughter of Henry Sellwood of Somersby and a niece of Sir John Franklin.

When the late poet laureate first met her at Somersby she possessed much beauty and charm. Carlyle described her as having bright, glittering blue eyes, "and," he adds, "were it not that she seems so very delicate in health, good might be argued of Tennyson's adventure."

Cholera in Egypt.

WASHINGTON, Aug. 12.—"Increase of cholera in Egypt" is the principal feature of the report received from the land of the Pharaohs by Surgeon General Wyman of the Marine Hospital service. "Notwithstanding the measures taken by Dr. Rogers Pasha," says the report, "the proportions of the cholera outbreak show that the disease has got beyond the control of the sanitary authorities."

Wreck of the St. Paul.

MONTEREY, Aug. 9.—The steamer St. Paul, Captain Downing, bound to San Francisco from San Pedro, was wrecked last night at 11:30 about one mile below Point Pinos; no lives lost so far as known.

The first news of this wreck was brought to Honolulu by Capt. Thompson of the S. C. Allen, who heard the report just as his vessel was leaving San Francisco.

Yale Professor Dead.

NEW HAVEN, Conn., Aug. 12.—Professor Hubert Anson Newton, head of the mathematical department of Yale, died tonight, aged 66 years.

Sir John Mills Dead.

LONDON, Aug. 13.—Sir John Mills, president of the Royal Academy, died at 5:30 p. m. today. Mills' death was painless. The Queen, Prince and Princess of Wales

and the Duke and Duchess of York have telegraphed their condolences, and many messages have been received from Europe and America.

A Roller Steamer Launched.

PARIS, Aug. 19.—In the presence of numerous foreign engineers and a big crowd of onlookers the so-called roller steamer, the invention of M. Bakin, a well known marine engineer, was today launched at the Calil dock yards at St. Denis. The vessel will traverse the Seine, cross the English Channel and go to London.

Brazilian Flag to be Raised.

BUENOS AYRES, Aug. 19.—The correspondent of the Herald in Rio Janeiro sends word that the British Legation has informed the Brazilian Chancellor that Great Britain has surrendered the Island of Trinidad. The English flag will be struck on the island after certain formalities. Brazil will send a war ship to Trinidad and raise the flag of the Republic.

School Question Settled.

OTTAWA, Aug. 19.—It has been ascertained on good authority that the Manitoba school question is as good as settled, and there will not be any necessity for remedial legislation. The decision has been arrived at after numerous interviews between the members of the Provincial Government of Manitoba and the Dominion Government.

Still Waiting for Wind.

STOCKHOLM, Sweden, Aug. 12.—The following telegram from Virgos harbor was dispatched by Professor Andrade on August 3d:

"The balloon has been filled for several days and is all ready for the ascent. Thus far everything has occurred as expected. The wind is still northerly; otherwise all is well."

Gail Hamilton Dead.

HAMILTON, Mass., Aug. 17.—Miss Mary Abigail Dodge (Gail Hamilton) died at her home here at 9 o'clock tonight from the effects of a stroke of paralysis received yesterday. She never recovered consciousness, and breathed her last quietly and painlessly, surrounded by all the members of her family.

Engagement in Hith Life.

CETTINJE, Montenegro, Aug. 18.—Victor Emanuel, Prince of Naples, the eldest son and heir apparent of the King of Italy, is betrothed to Princess Helene of Montenegro, the third daughter of the reigning Prince of Montenegro.

Saw the Eclipse.

YOKOHAMA, Aug. 10.—The eclipse of the sun was clearly visible here and at Tokio. Northward, however, in the direction the astronomers proceeded, the sky was cloudy and observations were impossible.

PERSONAL AND PECULIAR.

The Matabele girl is not devoid of sentiment, on the contrary, she has the greatest pride in the exploits of the man she marries. He may be old, toothless, with one leg in the grave, and the other feebly tripping a war dance; but if he can show on his assagai the blood of many victims, he is the greatest old beau in the kraal.

"How women walk," has recently been the subject of discussion in a Paris journal. According to this authority, the palm must be awarded to Frenchwomen. The Englishwoman, it states, does not walk; she travels. Her limbs appear to be moved by the engine of a steamer, and her feet have the proportions of an Atlantic liner.

The telephone line between Vienna and Trieste is believed to be one of the longest European lines now in operation. It covers a distance of 506 kilometres, or rather more than 314 miles.

A man who had struggled for 76 years recently committed suicide in Central Park, New York. He left a note assigning his reasons. They were neuritis, nervous prostration, rheumatism, congestion of the lungs, loss of strength, catarrh of the mucous membrane, pain and dyspepsia. He neglected to state whether he tried medicine before he bought a gun, which fact robs the tragedy of its most interesting feature.

Chairman Harrity is a great lover of the wheel. He has a wheel, but does not ride yet. He hopes to be a full-fledged scorcher before the next Democratic convention. He is opposed to new women and dislikes bloomers very much.

Governor Altgeld rides horseback and is in favor of all athletic sports.

The most celebrated composer of operas in Sweden, Ivar Hallstrom, has completed his seventieth year. Hallstrom is known as a successful song writer.

The statistics of life insurance show that in the last twenty-five years the average woman's life has increased from nearly 42 to nearly 46, or more than 8 per cent, while man's life average has increased from nearly 42 to 44, which is 5 per cent.

M. Sardon, the eminent French dramatist, is writing a play for Sir Henry Irving. The central figure of it will be Robespierre, and the drama will deal with events in the stirring period of the French Revolution.

FITZ IN THE TOILS FOR TRAMWAY CASE

Alleged to Have Shot Detective
While Searching for Spoils.

EVIDENCE FOUND IN HIS HOUSE.

Bos'n Ben Arrested for Complicity.
Nickels and Company Envelopes
Galore—Burned and Buried—Both
Deny All Knowledge of the Robbery.

The robbery of the Tramways Company's Palama office had its sequel in the arrest of Arthur Fitzgerald at 5 o'clock yesterday morning. Fitzgerald had been under suspicion ever since the case was reported to the police, and on August 21, the day after the robbery, Detective Kaapa procured a warrant to search Fitzgerald's residence, but no evidence of his being mixed up in the affair was found. The next chapter in the robbery was the finding of a bag of money in the Peterson stable, which is located in the adjoining lot to Fitzgerald's and about a hundred yards in the rear.

Suspicion then grew stronger that Fitzgerald was in the trick. Detective Kaapa detailed Ah Fat and William Huihui on the case and told them to take a position in the stable and watch for any one who might come around there at night. The stable building is a long one, the makai end being fitted with stalls and the mauka end a large room. A narrow hall divides these two apartments, and it was under this hall, just inside the door, that the money was found.

In the large room there were two chairs, a rocker and a small cane seated one. Ah Fat was sitting in the rocker and Huihui was dozing in the other chair about four feet away. Just about 3 o'clock yesterday morning Ah Fat heard a noise in the narrow hallway and saw through an opening in the partition a man on his hands and knees. He stretched his leg in order to touch Huihui and arouse him, but in doing so made a slight noise, which the intruder evidently heard. A second later there was a shot fired and Ah Fat received the bullet in the fleshy part of his thigh.

The man who fired the shot ran toward Fitzgerald's cottage. Huihui saw him and grabbed Ah Fat's pistol and fired twice without effect, and the runner disappeared. Ah Fat fell over on to the floor and Huihui believed he was badly wounded. Instead of running after the assailant, he went to the nearest telephone and sent a message to the police station for the wagon to remove the wounded man.

Captain Parker and a posse went out and took the officer to the hospital, where his wound, which was merely a flesh one, was dressed.

As the indications pointed to Fitzgerald as the culprit, Detective Kaapa started for his house at 5 o'clock to arrest him, but met him on King street, near Asylum road, driving his hack. He was barefooted and the officer placed him under arrest, against Arthur's protest. He said he had just returned from driving a load to Waikiki and knew nothing about the shooting. He was taken to the station house, and on looking at the soles of his feet one was found to have a fresh cut made by a sharp stone or thorn. He was locked up pending an investigation. Later officers went to the house to search for evidence.

It is a three-room affair of one story, located some distance up Asylum road, and is in rather a dilapidated condition. It is occupied jointly by Arthur Fitzgerald and James Bennett, otherwise "Bos'n Ben," the latter occupying the room to the left of the entrance, and Arthur a smaller one to the right. The back room runs clear across the house and is evidently used as a kitchen, dining room and pantry by the couple. There were a half dozen packages of Chinese tea, a loaf of bread and some butter in the room, but no other edibles. The dining table was a small affair with a drawer in it. In this was found several engraved visiting cards of Mrs. W. W. Hall and one of A. D. Friemann. These may have been taken into the house. Standing in the yard, at a corner in the rear of the house, was a stove improvised from an old drum. Lying near Captain Parker saw a Tramway money envelope, partly burned. A further search revealed several 5-cent pieces and a lump of nickel supposed to be the remains of some of the 5-cent pieces left in the envelopes and thrown into the fire to be destroyed. A search around the yard revealed about \$1.25 buried just under the surface in two places. In the garden was also found a pair of hammock spreaders, and about 8 ft. yards further back a hammock was found by Captain Parker, buried under some bushes. These are supposed to have been stolen August 7 from Mrs. McLain's on Alakea street, near King.

Returning to the house, Captain Parker found in a corner of the room occupied by Bos'n Ben a torn Tramway's packet and a dime lying on the floor. Raising the matting, he found a piece of the floor recently cut, forming a trap door. In Fitzgerald's room, or the one alleged to have been occupied by him, was a pair of overalls showing fresh earth on the knees, as though the wearer had crept for a long distance. On the mauka side of the house about thirty torn Tramway's coin envelopes were found.

TO SUPPLANT THE MONOWAI.
New Steamer to be Put on the Oceanic Line.

James Mills, managing director of the Union Steamship Company of New Zealand, is expected in San Francisco in a few days en route to Auckland,

says the Chronicle of August 10. Mills has been in Scotland inspecting the new steamer which is now being built by Denny Brothers, the celebrated ship-builders of Dumbarton. This craft is destined to take the place of the Monowai, which is scheduled to make but two more round trips between here and Sydney. According to Glasgow papers, the steamer now in the course of construction will be far ahead of any steamer that ever made the trip between America and Australia, and will compare with the crack steamers of the Pacific and Oceanic line of Australia. The tonnage of the new steamer will be fully 4700, while the length is 350 feet. The steamer is to be fitted up with every modern improvement, and in this respect will be modeled after some of the famous steamers running between New York and Europe. The new vessel will have a first-class passenger capacity of 250 and second-class accommodations for 150.

The Union Steamship Company of New Zealand owns fifty steamers. It is also having built a 3000-ton passenger steamer for the New Zealand and Australian trade.

OAHU OFFERS GOOD THINGS FOR COFFEE

Land in Waianae Range of
Mountains Quite Suitable.

ARENS' PLANTATION AT WAIANAE

B. F. Dillingham Grows Enthusiastic.
Samples of the Berries—Sixty Acres
of Trees—Opportunities for Laborers—Development of Oahu must come

B. F. Dillingham came into the Advertiser office Tuesday noon bearing triumphantly two magnificent coffee branches laden with two or three hundred good healthy looking coffee berries and wanted to know what was the matter with the coffee plantations of the Island of Oahu.

Mr. Dillingham is nothing if not an active advocate of the development of this island, and the tribute which he brought the Advertiser was indeed good evidence that Oahu is not to be entirely shut out of the coffee industry. Mr. Dillingham was fresh from a trip to the coffee plantation conducted by manager Ahrens of the Waianae sugar plantation. The section Mr. Ahrens has under cultivation is in one of the many gulches that run mauka from the sugar fields. The land is rocky and to all appearance not adapted to any kind of cultivation—except coffee. The land rises to a height of about 1700 feet and the coffee fields are protected from the strong trade winds by an almost perpendicular ridge some 2500 feet high that runs along the head of the gulch. It is in this unpromising valley that Mr. Ahrens has put in sixty acres of coffee and has 5500 trees in various stages of development. The trees from which Mr. Dillingham plucked his exhibition branches are three years old and according to Robert Rycroft, the Puna coffee grower, are among the best looking trees in the whole country. It is anticipated that fully six tons of coffee can be taken off the trees this year. On one of the primaries which Mr. Dillingham gave his special attention he counted 173 berries and he estimates that six pounds of coffee will be gathered from the three old trees.

"Now that just shows you," remarked the railway manager, "what Oahu can do. There is any quantity of just such land as Mr. Ahrens is cultivating on this island and what I want is for these local coffee lands to be developed. Just look about you for a little. There is Lowe's coffee ranch further along the Waianae range; there is coffee growing in Waiwala and around in Kahuku. Coffee will grow in Menoa valley and plenty of other places on the island.

"I tell you there's no reason in the wide world why this island should not produce 100,000 tons of coffee annually. Then here's another point. Look at the women and children in Honolulu that the coffee grower has to draw upon for labor. They could take the train out of Honolulu in the morning, work during the day and return at night. Why it would be fun for more than one thousand Portuguese families to say nothing of the money they would add to the family till.

"I've got nothing against the development of the other islands. I want to see the whole country go ahead, but I don't see why these coffee growers here at home are letting opportunities slip through their fingers that are right here under their very noses. Land is cheap and we want here just what they have on the other islands, a few progressive men to go ahead and make the business go. Look at the money locked up in this town. Just ponder awhile over the personal incomes that will reach and go beyond the hundred thousand dollar mark this year, and then look around you and contemplate how much land there is on this island that is practically going to waste. I tell you what it is the people here want to look about them a little and take run up a few of these coffee lands on the island of Oahu."

Prince Louis in Brazil.
NEW YORK, Aug. 19.—The Herald's correspondent in Rio de Janeiro cables: The Italian cruiser Cristoforo Colombo, with Prince Louis of Savoy on board, entered port today. The Prince was visited by the Italian Minister and his suite and by representatives of the Italian colony.

WINTHROP PLACED BEHIND BARS.

Says He Enjoys Speaking Acquaintance With Campbell.

DELAY IN COURT PROCEEDINGS.

Still Hunting for "Pete"—Campbell Identifies Winthrop—False Reports Regarding Plaintiff's Habits—Police at Work Gathering Evidence, Etc.

SAN FRANCISCO, Aug. 11.—Captain Lees added a notch to his record yesterday when, after four days of searching he put the alleged kidnaper, Oliver W. Winthrop, behind the steel bars and heavy doors of the City Prison. He has piled up enough evidence, moreover, to make matters look dubious for the captive, and has followed out the clues so well that the capture of Pete, the man of the mask and revolver, is said to be the next step in this singular case of crime.

Winthrop was captured by Detective Cody in Oakland yesterday morning, and he was taken to the City Prison in San Francisco before noon. The arrest was made on Sixteenth street, near San Pablo avenue, and it is believed that Winthrop had been to the Postoffice a short time before and was then preparing for an early flight from the State. He had a ticket for Mojave, bought on Saturday, and was waiting only for final word from his family. In case of alarm he was prepared for instant departure, and the Chief of Detectives thinks he meant to fly last evening.

Soon after his man had arrived, Lees served on him two bench warrants, and at 4:30 p. m. had him taken from the detectives' room in the City Hall to the City Prison, and there formally charged with robbery and assault with intent to commit murder. Winthrop was cool and unconcerned, but there was a nervous twitching of his clean-shaven lips which betrayed his emotion and distress. After being booked, he asked to be put in the same cell in which he had been previously confined, as he evidently thought it would again prove to be put in the same cell in which he was lucky. He will be arraigned Friday.

When Campbell was brought into the room with Winthrop the prisoner inquired casually of his Hawkshaw vis-à-vis "Who's that?"

And then the Hawaiian patriarch, lifting his hand dramatically, said thrice, "That is the man. That is the man. That is the man."

Winthrop did not flinch. Instead he coolly bit a piece from the plug of tobacco he carried.

When interviewed by his first statement—in fact, the sentence that alternated with every other one—was, "I've nothing to say."

H. W. Matthews, the attorney who defended him successfully on the murder charge before, had talked with him and he had taken his warnings to heart.

"I'm as mum as an oyster until my attorney releases me," he said. "Yes, I know Campbell," he said, in response to a question. "I've seen him twice."

"Have I spoken to him? Well, yes; once."

The name of Donald Archibald Urquhart has been connected with the Campbell kidnapping affair, but Captain Lees professes to believe that there is "nothing in it." The coincidences are strong enough, however, to provide a basis for rumors that the young mining man's connection with the case did not cut with Winthrop's invitation to assist in the abduction business.

The friends of Campbell are indignant of the reports that he is given to going on sprees and afterward tells marvelous stories of being kidnapped and robbed. They denounce these stories as part of the plan of the defense of Winthrop.

Fred Wundenberg, a well-known Honolulu man, who was formerly Postmaster-General of the Hawaiian Government, said yesterday: "I cannot understand why these stories are circulated against Mr. Campbell. I have lived all my life in the Hawaiian islands, and I have known Campbell for twenty-five years or more. I never heard of this man James Douglas, who pretends to have been steward on Government vessels. This statement shows the man a liar, as the steamers are not Government boats, but belong to the Wilder Steamship Company, of which Campbell is a member."

"I have asked many people who have lived in Honolulu if they ever heard of Douglas and they say they have not. I have known all the stewards of the two steamers in question for many years and no Douglas ever served in that capacity on them to my knowledge. Though Douglas is not known by people from Honolulu, he may have been a hanger-on around the low sailors he mentioned. Mr. Campbell never went to them. The Keystone became so notorious it had to be closed up, and the Anchor was of the same class."

Consul-General Charles Wilder indorses the statement made by Mr. Wundenberg and adds: "I never heard of Mr. Campbell going on sprees and telling wild stories of his robbery. Had Mr. Campbell been in the habit of doing what this man Douglas says it would have been known all over Honolulu. I can truthfully say that I never heard of anything of the kind."

James Campbell was seen at the Hotel Vendome in San Jose last evening. He said he did not know Douglas and that there was not a word of truth in his story.

A discussion arose during an endeavor of the defense to postpone the arraignment, but the Court would not hear to it, saying there was no reason why the arraignment should not be made at once. Then followed the reading of the indictment.

At the conclusion of the reading the accused was requested to plead, but Attorney Bell interposed an objection, asking a week's time in which to plead. Black said he was anxious to have the case proceed, but Bell insisted that he had not had time to examine the indictment or the qualifications of the Grand Jurors, and the sufficiency of the indictment might be attacked. Black said he wanted a speedy hearing in order to be sure of the attendance of the prosecuting witness. Bell asserted that he was equally anxious for a speedy hearing, and the Court gave the defendant until 10 a. m. Monday to plead.

The identity of "Pete" is still as much a mystery as ever. Josephine Duntun, the adopted daughter of Mrs. Margaret Duntun, is the only person besides Campbell who saw the man at the California-street house and who can give a description of him.

GETTING READY FOR TAKING A CENSUS.

Blanks Have Been Prepared for
the Purpose.

WHAT MR. ATKINSON HAS DONE.

Completeness of the Forms—Very Little Writing to be Done—Possible to Give Number of Inhabitants as Soon as Census is Taken, Etc.

The blanks for use in the Census Bureau are finished and Superintendent Atkinson is busily engaged in completing the details of the work preparatory to placing the blanks in the hands of the enumerators.

In getting up the blanks Mr. Atkinson has had as guides papers from different governments where the census has been taken within recent years and the result is in some respects a combination of the best points in them; original ideas have been introduced and the whole makes the blanks the most complete and embodying all the minute detail, but with less complication than the average.

One of the blanks is a commission to the enumerator which he may present wherever his authority to ask for information is questioned. This is signed by the General Superintendent and the District Superintendent. Another is a return of all dwellings and inhabited buildings of all kinds in each sub-division. This will show the number of buildings used as quarters for plantation laborers, jails, hospitals, hotels and boarding houses, lodging houses, boarding schools, private residences and churches. It will also show the character of the material from which the buildings are constructed. This blank is filled by the enumerator from the data collected by him when he visits the places.

Perhaps the most important blank is the one which will be left at the residence of every householder on the 27th of September, on which day the census will be taken. This is a large paper with an extremely official appearance, having on the outside the seal of the Republic and blank spaces showing the island, district, street and number of the dwelling.

At the bottom of the first page are the directions to the person who is to fill up the blank. The two inside pages consist of a number of squares showing the age, sex, married or single, widow or widower, divorced, nationality whether Hawaiian, part Hawaiian or foreign, and Hawaiian born both parents are foreigners. In order to ascertain the government to which part Hawaiians may hold allegiance the nationality of the father is asked or if the father is naturalized, of what country and also the business or occupation.

To the right of these spaces will show of the wife how many children she has living, registered voters, read and write English or Hawaiian, or language other than either of those mentioned. Whether children of the family attend either government or independent schools. Then there are spaces for religion and ownership of real estate, cattle, horses, pigs and goats.

On the back of the blank is a model showing just how the blank shall be filled, and the chief point of difference is in the fact that the writing of yes or no to any of the questions is avoided and a mere stroke of the pen is used. The occupier of the dwelling has no writing to do except in filling in space provided for nationality. In nearly all the models Mr. Atkinson has the sex of persons was marked by an initial letter, but in those to be used here separate columns are provided so that within a day or two after the enumerators hand in their returns, that is, after the last return comes in from the other islands these columns may be added and the population and sex of the inhabitants may be ascertained. This is an original idea of Mr. Atkinson's and will facilitate matters very much.

There will be 220 enumerators and 22 district superintendents and each of these will be provided with a book in which the boundaries of the sub-division will be laid down. Entries of every schedule of the householders will be made and the figures in each column added and a summary made at the end of the book. At the completion of the census the total of male and female inhabitants and number of dwellings will be on one line. To assist the enumerator in keeping within the exact bounds of his division he will be provided with a small pocket map.

An effort will be made to obtain the acreage of cane, both plant and ratoon,

on the group, but the means at the disposal of the bureau prevent the obtaining of the area of coffee, taro and rice, but there will be an effort made to get the number of coffee trees.

COURT NOTES.

Suit for Damages Against Dr. Mc-Lennan—Insurance Case.

H. Leonard has filed a suit for damages to the amount of \$1000 against Dr. D. McLennan for injuries sustained by the plaintiff while being treated by the doctor for a malady.

The doctor who intends leaving on the Monowai today has filed a bond for \$1050 to compensate plaintiff in the event of the suit being decided in his favor.

It seems that plaintiff had some trouble with one of his legs and the doctor advised him to heat a brick, cover it with flannel moistened in vinegar and apply it to the pain. The patient did so and the result was a badly burned leg which bothered him and prevented his working for a month and a half. The result was the suit filed yesterday.

The suit of H. W. Schmidt & Sons against the Royal Insurance Company was decided in favor of plaintiff. The jury stood 9 to 3.

The Morrow assault case was on trial all of yesterday and at 6:30 p. m. the jury returned a verdict of guilty, three dissenting. Attorney Creighton for the defense noted a number of exceptions and will probably appeal the case.

LOCAL BREVITIES.

Sugar, 3%.

Mrs. Grant has been making purchases of furniture for the Hilo hotel. It is rumored that Arthur Johnstone has been appointed port surveyor at Hilo.

Among the passengers on the Monowai last night was Judge A. S. Hartwell.

There will be a special meeting of the members of the Queen's Hospital on September 23.

About double the quantity of sugar expected has been received during the present month.

Mons. Louis Volsson, the new French counsel to Honolulu, arrived by the Monowai last night.

Hopp & Co. are offering chamber sets at \$27 and elegantly upholstered Portiere couches for \$12.

U. S. Minister Willis and family have taken the von Holt residence, Waikiki, for two months and possibly longer.

The affairs of the Lanai Ranch Company have been satisfactorily adjusted and the final papers were signed yesterday.

Dr. J. T. Wayson will have charge of the Insane Asylum and Dr. George Herbert's practice while the latter is at the coast.

The Hutchinson Plantation Company will pay a dividend of 25 cents per share on the 20th.—San Francisco Bulletin, Aug. 13.

Mrs. Lewis J. Levey begs to return her sincere thanks to the members of the Jewish Fraternity, the Sons of St. George and other friends, for their kind sympathies in her affliction.

The Maui teachers' base ball team has challenged the Pacific Tennis Club to a game of base ball, and the challenge has been accepted, the event to take place in about a fortnight.

Sheriff Cox, at Waiwala, gave a luau yesterday which was attended by the leading residents. Some of the guests ate poisoned fish and were very ill in consequence. The Sheriff suffered severely.

Miss Mildred Kinney and Mr. H. M. Wells were married at the residence of T. W. Hobron last night by the Rev. S. E. Bishop. The ceremony was private, only a few of the near friends being present.

While Captain Scott was on Hawaii he was the guest of D. H. Hitchcock at his mountain residence a few miles from the volcano. The captain brought back with him some blackberries, raspberries and rhubarb which Mr. Hitchcock grew on his place.

J. W. Price, the balloonist, left for Wailuku, Maui, on the Claudine yesterday, where he intends to make an ascent. He will return to Honolulu in about a fortnight, after making two or three ascents on the Island of Maui. Labaina a few days ago.

Hugo A. Fisher, the famous water color artist from San Francisco, leave for the volcano on the Kinau today. While away he will make sketches of various points of interest on Hawaii. J. T. Stacker of this paper will accompany Mr. Fisher on the trip and furnish descriptive matter for an illustrated brochure on Hawaii, which Mr. Fisher will publish on his return to California.

MRS. DOLE INTERVIEWED.
Say I everything is Quiet and Nothing to Tell.
Mrs. Sanford B. Dole, wife of the President of the Republic of Hawaii, arrived here yesterday by the Peru from Honolulu, says the Call of August 12th. She will start this evening for the East. When seen at the Occidental last night she said:
"All that I can say regarding Island affairs is that everything is quiet. There is simply nothing to tell. Mr. Dole is well, and just as I was leaving he was starting for one of the other islands on a little vacation trip, which he is probably enjoying now. My visit here is a private matter. I am on my way East, first to see my nephew, Guy T. Bennett, entered in Williams College. Afterward I shall visit New York and Boston before returning here."

Zellah Bowen Dead.
Shortly after 12:30 p. m. Wednesday the only daughter of W. A. Bowen, aged 5 years, died at the home of her parents in Kinau street, the cause of death being the effects of pressure on the brain resulting from an abscess in the ear. The funeral took place from the family residence at 4 p. m. yesterday. The services were conducted by Rev. S. S. Palmer and J. Leadingham, and were very impressive. Hymns were sung by Mrs. Warriner and H. F. Wichman. Miss Kelsey being accompanist. The casket was borne to the hearse by Walter Dillingham, J. A. Gilman, John Waterhouse and Ed Hitchcock. There was an abundance of flowers in various designs. The interment took place at Nuuanu cemetery.

Bennington for Honolulu.
VALLEJO, Cal., Aug. 9.—The gunboat Bennington left the yard yesterday for San Francisco, where a supply of coal will be taken aboard. It is the intention then to proceed North and join Admiral Beardslee's squadron for fleet drill, after which the little gunboat is expected to steam away for Honolulu.

COFFEE GROWING IN OLD MEXICO

Methods of Cultivating the Berries in Southern Climes

Profits From the Industry—How the Seeds are Treated Before Planting, Shade an Essential—Old Trees Utilized—Banana Trees will Answer

A consular report on coffee growing in Mexico, where the industry has flourished since the beginning of the century, appears in the last issue of "The Sugar Cane" (Manchester). It contains some notes on the subject of growing coffee under shade, which will interest coffee planters. The report says:

On most plantations in Mexico it is usual to preserve the large trees for shade, but in districts where the best climatic conditions exist this is unnecessary. Much shade is in itself detrimental to the full grown coffee plant, and localities where it is required owing to great sun heat and lack of proper moisture should be avoided. Although there can be little doubt that where the climate is most suited to the growth of the coffee plant shade is unnecessary and even injurious, the practice of having most of the large trees of the natural forest as shade for the coffee trees is so general in Mexico that it cannot be passed by without further notice. Many persons possessing considerable experience in coffee planting in Mexico will even be found to maintain that shade is absolutely essential, and it is quite possible that in the districts with which they are best acquainted such may be the case. On the other hand, in countries where coffee has been extensively cultivated for a longer time than in Mexico, the plant certainly succeeds better without shade. Further experience is perhaps required before a definite conclusion can be arrived at as regards this country, but it will scarcely be denied by the most enthusiastic supporter of the Mexican system that the tendency has been to make the shade too thick. The truth seems to be that coffee can be cultivated profitably in districts which are not naturally suited for it, and that in some of these shade is really necessary to protect the plant from the excessive heat of the sun. Owners of land in comparatively hot and dry districts may find it necessary to shade their plants with forest trees, or in extreme cases even with bananas, but such localities should be avoided by persons who have a free hand in the selection of a site for their plantation. Regarding the planting of coffee, the report says:

When the clearing of the land is commenced a suitable spot is selected for sowing the coffee bean, in order to establish a nursery, to be made use of in the following year. Trees required for the first planting are generally purchased from existing coffee plantations. The spot selected for the purpose should be thoroughly cleared of trees, should be easily irrigated and of average fertility. In Mexico it is usual to leave some of the trees as shade, but in other places it has been found that the drip is injurious to the young plants, and that it is far better to arrange a shade of cut brushwood. Long ridges are formed with a width of from 4 feet to 6 feet, with walks between, in order that the workmen may later on reach the plants when it is necessary to clean them. In forming the ridges the earth should be well broken with hoes to a depth of at least six inches, the stones picked out and the surface smoothed down. The ground is then ready for the coffee bean. The beans are dispulped and allowed to foment, so as to admit of the saccharine matter being washed off. When this is done the beans that float on the top of the water are taken away as being unsuitable, and those which sink to the bottom are placed to dry for one day in the sun, and for two additional days in the shade. They are then ready to be sown. The sowers make small furrows in the earth with a pointed stick, across the ridges, at a distance of 5 inches apart and 2 1/2 inches deep. Another laborer follows, placing the coffee beans in the furrows, 4 inches apart until the ridge is finished. The beans are then lightly covered with well sifted earth, without being pressed down, and are afterward watered with a sprinkler. Subsequently the ground is watered every two or three days, and in from forty to sixty days the plant begins to grow. Care must afterward be taken to keep the ridges free from weeds, and in about eight months the plant is ready for transplanting.

Slightly different methods are sometimes adopted and sometimes the young plants found growing underneath the coffee trees are planted direct in the plantations, but this system is no longer considered a good one and has been generally abandoned. The time for sowing varies in different States, and in some of them sowing is carried on at all times of the year. It is desirable, however, to time the sowing of the seed in the nurseries in such a way that the plants may be from 8 inches to 6 inches high in the plant nursery. An acre of ground holds about 500 trees, planted 6 feet apart, with 7 feet between the rows. This opening is very generally adopted though some planters in this country prefer to plant at greater distances. Special care should be taken in planting the trees that the taproot is not twisted or bent. Nipping off the portions of the taproot in the right way does not materially affect the growth of the tree, and obviates the

danger of its being turned up which in a year or two kills the plant.

The other precautions to be taken in planting do not require special mention, as they are such as would commend themselves to any one having even a slight knowledge of arboriculture. The best time for planting is the early part of the rainy season. Irrigation and also manuring are sometimes resorted to in Mexico, but if a suitable site has been selected neither will be necessary on a new plantation. It may be added that the practice of manuring the nursery ground is not a good one, as it unfits the young plants for their ultimate destination.

The export of coffee from Mexico in 1894-5 was 324,355 cwt. The cost of coffee growing per acre in the sixth and subsequent years after planting is estimated at \$11 17s, and the receipts from a crop of 1,200 pounds of coffee at 21 Mexican cents are put down at \$27 6s, leaving a margin of \$15 9s per acre for interest on capital and profits to the owner. In making these calculations it has been assumed that a good site has been chosen for the plantation, and that the land and its products have been properly treated.

NEEDED IMPROVEMENTS.

A Slightly Place Where the Old Wash House Stood.

The extensiveness in the improvements down along the vicinity of where the old wash houses used to stand can not be imagined until a visit is paid to the place. The addition of land by

BUOY FROM THE GUNBOAT "BANJO." [Sketches by an Advertiser Artist.]

means of the dredger pipes, the new wall along the Nuuanu stream, confining the water to a certain limit, and the whole appearance of the place goes to show that some good work has been done by Superintendent of Public Works W. E. Ravell and his assistants.

The wall is not yet completed, but will be in a little while. Hotel street used to run into a marsh and a small wooden building where Chinamen used to clean the bones of their relatives preparatory to sending them back to China for interment. Now there is a complete change. It runs directly into King street, and at this point is very nicely curved. All the old buildings have been removed and now none but the very best are given place. Standing at the foot of Hotel street and looking up, the Arlington Hotel can be plainly seen. There is a clean sweep for the cooling breezes that are so scarce now, and the disagreeable smells from the marshes that used to exist are a thing of the past.

The most convenient part of this addition to Hotel street is the fact that now there is a straight run to King without having to turn off on some side street.

Just now men are busy at work moving the houses to the rear, and about the chemical engine house, so as to provide for the cutting through of Pauahi street clear to the stream. After the wall in that vicinity is completed the dredger will be set to work filling in.

It will not be long before men will be set to work digging the new bed which will join the present stream several hundred feet above St. Louis College, doing away with Smith's bridge and making the course straight. The stream will run along in front of St. Louis College. There will be a twenty-foot driveway between the bank and the College fence.

CHANGE OF MANAGEMENT.

E. R. Hendry Retires From the Hawaiian Hardware Co.

E. R. Hendry retired from the management of the Hawaiian Hardware Co. yesterday and was succeeded by L. M. Vettleson who has had charge of the accounts for the past year.

Mr. Hendry organized the company in August, 1889, and by careful buying of novelties and staple articles and by judicious use of printers' ink he built up a large business. He contemplates a long rest before embarking into business on his own account.

L. M. Vettleson, the new manager, was for years bookkeeper and manager of the store at Spreckelsville, Maui, but when the plantation management changed Mr. Vettleson retired and took a position in one of H. W. Schmidt & Son's stores on Hawaii. He resigned his position there about a year ago for one with the company of which he is now the manager.

"Let me give you a point or two," said Mr. F. Gregg, a popular conductor on the Missouri Pacific Railroad. "Do you know that Chamberlain's Colic, Cholera and Diarrhoea Remedy cures you when you have the stomach ache? Well, it does." And after giving this friendly bit of advice the jolly conductor passed on down the aisle. It is a fact that thousands of railroad and traveling men never take a trip without a bottle of this Remedy, which is the best cure for bowel disorders in the world. 25 cent bottles for sale by all drug stores and dealers. Benson, Smith & Co., Agents for H. I.

A large boiler that has been lying in the yard of P. W. & Co. for some time has been removed yesterday and placed in the engine house. It is now undergoing repairs.

LIFE BUOY FOUND IN HAWAII CHANNEL

The Kilauea Hou Finds a Japanese Life Buoy Floating.

BELONGS TO GUNBOAT BANJO.

No Knowledge of Whereabouts of Vessel—Last Heard From in Korea. May Possibly Have Been Wrecked. Last Advice on the 11th of July.

When the Kilauea Hou was passing through the Hawaii channel on her up trip, August 23d, the captain was notified of a peculiar looking object in the water. At first appearance it seemed as if there was a man in the water, but upon approaching closer it was found to be a life buoy such as is used on men-of-war. A boat was lowered and the object of interest taken aboard.

The buoy was brought to Honolulu, and upon arrival of the Kilauea Hou

BUOY FROM THE GUNBOAT "BANJO." [Sketches by an Advertiser Artist.]

on Tuesday the matter was reported to the Wilder steamship office.

The Japanese characters in brass on the wooden arm of the buoy led the steamship company to telephone to the Japanese Consulate.

The secretary was sent down and found the letters to read "Banjo," the name of a Japanese gunboat. Receiving an order from C. L. Wight for the delivery of the buoy into his possession, he put it into a hack and took it to the consulate yesterday morning.

A reporter of this paper called a little later and found the buoy forming a very nice decoration on the veranda. The secretary stated that it was just barely possible that the "Banjo" might have been wrecked, but not in the tidal wave as some people supposed, for advice from Japan dated July 11th, 1896, reported the gunboat in Korea looking out for Japanese interests. How the buoy ever came to get away from the "Banjo" is a mystery.

The gunboat "Banjo" has the following measurements: Length over all, 159.4; breadth, 26.0; depth, 15.7. Her gross tonnage is 708 and her indicated horse power 570.

OPERA HOUSE LIGHTED.

Mrs. Irwin Selects Colors for the Balcony Projections.

The Opera House was lighted last night throughout, between the hours of 8 and 9, for the purpose of allowing Mrs. W. G. Irwin a chance to inspect and pass judgment upon the colors used on the ceiling and the balcony projections of the four boxes. Mrs. Irwin expressed herself as being very much satisfied with the color of the ceiling, although by daylight she had thought this too light. The incandescent electric lights seemed to produce just the proper effect, and brought out most satisfactorily the ornamental work.

Each one of the four balcony projections had been painted a different color so as to give room for a choice. None of those represented were chosen, but Mrs. Irwin expressed a wish that they be painted a kind of golden bronze to accord with the panels of the theater, and also that the tips of the plumes be gilded.

The walls will be painted a light salmon color, to accord with the panels.

A walk around the theater disclosed the all-important fact that from any point in the building where seats are placed a good view of the whole stage can be obtained.

REWARD FOR A DREAM.

Lost in the month of September, An exquisite Dream and Belief; It either was dropped on Life's highway, Or stolen by Time, the arch thief. If found, please return to the owner—Its value is small save to her; As reward, all her earthly possessions She offers without a demur.

This is small that the owner could hold it.

In one human heart's little space—So great all earth shone with its brightness.

And looked like a glorified place. If found and returned in good order, the offered reward will be paid. But the finder is cautioned against delay.

Primes exposed to the air sometimes fade.

Kate Field's Washington—1885.

A person given that birds do not fly, that peaches are because they cannot, that the foot which the leg is to look at when walking and you will see it close its toes as it raises the foot, and opens them as it touches the ground.

A Model Plant is not complete without Electric Power, thus dispensing with small engines.

Why not generate your power from one CENTRAL Station? One generator can furnish power to your Pump, Centrifugals, Elevators, Flows, Railways and Hoists; also furnish light and power for a radius of from 15 to 26 miles.

Electric power being used saves the labor of hauling coal in your field, also water, and does away with high-priced engineers, and only have one engine to look after in your mill.

Where water power is available it costs nothing to generate Electric Power.

THE HAWAIIAN ELECTRIC COMPANY is now ready to furnish Electric Plants and Generators of all descriptions at short notice, and also has on hand a large stock of Wire, Chandeliers and Electrical Goods.

All orders will be given prompt attention, and estimates furnished for Lighting and Power Plants; also attention is given to House and Marine Wiring.

THEO. HOFFMAN, Manager.

Do You Know

A Good Thing

When You See It?

Most people do, when the price is right. A

Bed Room Suite

—of Seven pieces for \$27 is as right as can be. Every piece of hard wood, and beautifully finished. What's the use of paying thirty-five dollars elsewhere for the same thing!

This is only a small advance over Chicago prices. No use of having old furniture in the house when you can buy new at this figure. Think again! ..

\$27

The prettiest thing in the couch line is covered with a portiere. You've seen them before, and thought them expensive. What do you think of a ..

\$27

Portiere - Covered Couch

... for \$12! \$12!!

An inspection means that you will buy one. Come and inspect.

Political Pot Bubbles.

HOT SHOT FOR POPULISTS.

Populism is falsely founded as regards the principles of government, and it is not likely to be successful. Even those who have solicited and procured legislation in the interest of capital see the danger of government interference magnified in this new attempt to apply it, and if they become more thoughtful and less immediately selfish, this will be a warning to them against the course they have been following. The lesson they have taught the Populists may logically return to plague the inventor. The safety, as regards the success of Populism now, is in the extravagant claims it makes for Government aid. Its more enlightened members are seeing this already, and we understand their counsel has prevailed so far that the scheme for a sub-treasury from which it was proposed that the Government should lend money to the people at a low rate of interest, is abandoned.—Boston Herald.

KENTUCKY POLITICAL STRAWS.

Here is a political straw that is quite out of the ordinary: The other day the Louisville Courier Journal sent its reporters among the Democratic business men of that city to find out how they feel in respect to the platform and ticket of the Chicago convention. None but Democrats were interviewed, all politicians and professional men being ignored. Of the 225 questioned, 155 declared themselves squarely against the ticket and said they would not support it. Of the remaining 70 Democrats 40 were non-committal, while only 30, or less than one-seventh, declared that they would support Bryan.—Boston Evening Record.

TRUST THE PEOPLE.

Let us trust the people. Let us reason with them and teach them. There remain over a hundred days before the election. Newspapers and orators have all that time in which to expose the delusion that has led these men astray. In the meantime, let us remember that they are not anarchists, but American fellow citizens, most of them honest and sincere and patriotic in their intentions, though mistaken and imposed upon by twenty years of false teaching. The Republic is safe. Nobody has fired upon the flag or is getting his gun to do so. Some of our fellow Americans have adopted a dangerous policy. That is all. Their defeat at the polls will end their delusion, and their defeat will be much more easily and surely accomplished by discussion than it could be by the use of unjust and excited epithets. Trust the people!—New York World.

"The fact that the grandfather of Candidate Arthur Sewall, Sam Smith, was the judge before whom some of the Salem witches were tried and convicted, may have no bearing upon affairs of the present, but it is history just the same," remarked a politician at the Fifth Avenue Hotel in New York the other day. Any one who wants to get at the root of his family tree can do so by securing a nomination.

To our mind the most dangerous feature of the Chicago platform is the sixteenth paragraph, which directly assaults at once the judiciary and the national executive for their efforts at the suppression of anarchy in the time of the Chicago strike riots of 1894. Every man, no matter what his station or calling, who is not ready to surrender government to the whim of the mob, must utterly condemn the infamous plank in a weak and bad platform.—Chattanooga (Tenn.) Times.

Bicycles will cut a great big figure in political demonstrations this fall. An attachment has been invented which will safely carry an ordinary kerosene torchlight. It is probable, however, that lanterns will have the call over tin lamps, because the effect is prettier and the unpleasant odor of burning oil is done away with. Already these attachments are being manufactured in large quantities here. Whether the campaign managers will purchase wheels for the shouters is a horse of another color.

MRS. HOBART'S TELEGRAM.

When Hon. Garret A. Hobart was nominated at St. Louis for vice president, one of the first messages of congratulation he received was from Mrs. Hobart to Paterson. She telegraphed her husband in this pretty fashion: "Ruth L. 16."

The formula employed by Mrs. Hobart has no relation to the ratio of 1 to 16, or 16 to 1. It simply indicates the well-known text in the Bible wherein Ruth says: "Untread me not to leave thee, or to return from following after thee, for whither thou goest, I will go, and where thou lodgest, I will lodge."—New York Sun.

THE COUNTRY'S RELATED TO HIM.

(From the Atlanta Constitution.) He has cousins By the dozens—Bryan! Uncles—aunties, In all shanties, Bryan! Telegrams of family joy, Bryan! "Knew him when he was a boy"—Bryan! "Always said that he would win"—Bryan! ("Don't forget us when you're in Bryan!")

IN WOMAN'S INFLUENCE.

There is no limitation to the influence that may be exerted by woman in the United States, and no adequate tribute can be spoken of her services to mankind throughout its long and

eventful history. In the distant period of settlement, in the day of revolution in the trials of western pioneer life during the more recent but dread days of our civil war, and indeed in every step of our progress as a nation, the devotion and sacrifices of woman were constantly apparent and often conspicuous.—Gov. McKinley in Speech to Cleveland Women.

THAT POLITICAL UNREST

We are not among those who believe that every disturbance in the business of the nation is to be laid at the door of the government. If men would give their attention more to the correction of their individual mistakes, and would inform themselves more carefully as regards the laws of business, and study more attentively the condition of business in the world about them, they would find that there is a great deal in business depression that government has neither cause nor can cure. But the currency is an exception here. This nation has prospered under high and under low tariffs, and it is hardly in the power of any tariff to impede materially its own march in this direction. With the currency it is different. The currency is the life-blood of business, and it is in the power of the government to poison it. The people are suffering now from the fear that it may be poisoned. The main purpose of those who are striving for sound principles in this campaign is to avert that calamity, and to remove apprehension that it may be visited upon the nation. It is this which is breaking up parties today, and which must cause men who have not acted together before to present a united front in the coming election.

It is always gratifying to receive testimonials for Chamberlain's Colic, Cholera and Diarrhoea Remedy, and when the endorsement is from a physician it is especially so. There is no more satisfactory or effective remedy than Chamberlain's Colic, Cholera and Diarrhoea Remedy," writes Dr. R. E. Roy, physician and pharmacist, of Olney, Mo., and as he has used the Remedy in his own family and sold it in his drug store for six years, he should certainly know. For sale by all druggists and dealers. Benson, Smith & Co., Agents for H. I.

They Scamper.

About twenty natives were collected in a group outside the Oceanic wharf shortly after noon yesterday playing at a game known as Russian war, the necessary figures being painted on a dirty rag. They were huddled together so closely and were so much interested in the progress of the game, and incli-

dentally the 60 cents up, that they were not aware of the approach of a frequenter of the water front who, upon arriving near enough, let out a yell and jumped into the middle of the gang. There was consternation at once and money and cloth were dropped and the natives went scampering off in all directions, some over the lumber piles, others into the Oceanic wharf and four into the water.

Slight Accident.

Accidents will happen, even in the very best regulated shooting galleries, such as the one at the corner of Hotel and Bethel streets.

It was just about 3 o'clock yesterday afternoon when a Japanese woman was passing over from the corner occupied by Ordway & Porter, to Horn's bakery. When she reached the middle of the street there was a report from the direction of the shooting gallery, and the woman uttered a cry of pain as she threw up her right hand and found that a bullet had passed through the fleshy part of the index finger.

It seems that there was quite a crowd in the gallery watching two men shooting. One of the 22-calibre rifles had been discharged and the white attendant was putting another cartridge in the place of the spent one. Through some accident the gun was discharged, and passing through the door the bullet hit the Japanese woman in the street.

She was taken up in a hack to a physician's, where her injury was attended to.

It is a fortunate thing that none of the people in the gallery were injured.

DR. J. COLLIS BROWNE'S CHLORODYNE.

Original and Only Genuine.

COUGHS,
COLDS,
ASTHMA,
BRONCHITIS

Dr. J. Collis Browne's Chlorodyne Vice-Chancellor SIR W. PAGE WOOL stated publicly in court that Dr. J. COLLIS BROWNE was undoubtedly the INVENTOR OF CHLORODYNE, that the whole story of the defendant Freeman was deliberately untrue, and he regretted to say had been sworn to. See The Times, Jan. 13, 1864.

Dr. J. Collis Browne's Chlorodyne is a liquid medicine which assuages PAIN OF EVERY KIND, affords a calm, refreshing sleep WITHOUT HEADACHE, and INVIGORATES the nervous system when exhausted. Is the Great Specific for Cholera, Dysentery, Diarrhoea.

The General Board of Health, London, report that it ACTS as a CHARM, and dose generally sufficient.

Dr. Gibbon, Army Medical Staff, Calcutta, states: "Two doses completely cured me of diarrhoea."

Dr. J. Collis Browne's Chlorodyne is the TRUE PALLIATIVE in Neuralgia, Tooth, Cancer, Gout, Rheumatism.

Dr. J. Collis Browne's Chlorodyne Rapidly cuts short all attacks of Epilepsy, Spasms, Colic, Palpitation, Hysteria.

Important Caution.—The name of this Remedy has given rise to many Unscrupulous Imitations.

N. B.—Every Bottle of Genuine Chlorodyne bears on the Government Stamp the name of the inventor, Dr. J. Collis Browne. Sold in bottles of 1s. 4d., 2s. 6d. and 4s. 6d., by all chemists.

Sole Manufacturer,
J. T. DAVENPORT.
